

THUMP

- › the striking face enables nails and staples to be driven into fence posts
- › the face has a serated edge to crimp wires

CUT

- › pincer and clamp on top jaw enables wires to be cut and flattened
- › the jaws can also be used to tighten any loose or sagging wire

TUG

- › pincer allows nails and other objects to be pulled free
- › pincer can also be used to create loops and bend wire

TWIST

- › grips on inside of handle for straining and twisting wires
- › wire can be stretched by placing inbetween the jaws and then turning the wire by twisting

LEVER

- › hook enables staples to be removed from fence posts
- › leaning the tool and using the post or wood that the staple is in creates extra leverage

SHEAR

- › two shear type wire cutters which will cut from either side
- › able to cut at angles in order to create barbed wire
