

Kosmic Forest | Art Installation

This project was a team initiative to build an installation for the annual Kosmic charity event hosted by the School of Architecture. The brief requested an art installation under the theme of Apocalypse and Resurrection. As project manager, I shared and guided the vision for my concept. Inspired by nature's phenomenon whereby spiders escape into trees during massive floods, this tragedy results in a strikingly beautiful cocooned effect. Wrapped around living trees, life continues to persist.
