

## First Responders Medical Kit Bag

The final concept proposal is a kit bag and vest combination that offers better efficiency and 'ease-of-use' that saves vital seconds when treating a 'Category A' call with time being of the essence. With the option of using a horizontal and vertical format, the new kit bag offers greater versatility to the users as well as reducing the working footprint when responding to a call. Instinctive colour coded compartments provide separation between different equipment offering better organisation and greater efficiency when looking for life saving equipment.
