Autobiographical Statement

I graduated with my Associates in Computer Science in 2002 from Monroe College in New York. I also have a diploma in Web Design and now I am currently in my 3rd quarter at the Art Institute of Fort Lauderdale. I am pursing my bachelor degree in Web Design.

Professional Career Goals

After graduating, I would like to work for a company so that I can develop my skills and become a better designer. It would give me more experience "under my belt". I would like to work for a company for at least 3 years until I can branch out on my own.

My goal is to develop a web design company based out of West Palm Beach, Florida. However, I have intentions of doing business for companies throughout the Caribbean Islands. I would love to dive more into Graphic Designs. I think it would help my business out even more.

Throughout my education, I have only developed two sites. My very first site was done completely in HTML, and my second was done through the use of FLASH. I am really eager to learn more of FLASH.

Qualifications & Technical Skills
