

E-LEATHER[®]

WELCOME

TO AN ADVANCED, TECHNICALLY MASTERED,
ECO FRIENDLY, HIGH PERFORMANCE
MATERIAL FOR THE AVIATION INDUSTRY.

Enlightened airlines all over the world are flying E-Leather and reaping the benefits of a lightweight, easy clean material that provides an hygienic and quality apperance that lasts.

All our production is protected by worldwide patents. Our process uses specified core materials which are sandwiched between two layers of recovered natural leather fibres.

This is achieved by a process called 'HYDROENTANGLEMENT' which E-LEATHER has developed and patented for this purpose. E-Leather weighs up to 40% less than traditional leather; this is then finished to add colour, grain and texture plus specific performance requirements such as scuff protection or fire resistance.

CLEAN
TECHNOLOGY
NATURALLY.

HIGH PERFORMANCE
AVIATION MATERIAL

up to
40%

Lighter than traditional leather
