

# Prototype Bag

I first cut the sides of the bag out, which gave enough room to fit the Helios inside. It fit comfortably and the proportions of the bag were suitable for the size of the users body, measured from a cardboard cut out.

I detached the sides of the bag and sewed on a back panel, as well as meshing to the sides. I extended the base and fed the tubing in to the front pouch, where it emerged at the front of the bag.

O<sub>2</sub> Bag
