adjustments: 90 %

RAILS

elements : monitoring management displays
time : 2.5 hours
adjustment : 15 %

SIDE CONSOLE

elements : elements for agricultural control
time : 4.5 hours
adjustment : 80%

CABIN KEY-FEATURES

usage analysis

Based on a widespread workflow analysis, that included all sections of agricultural businesses, 4 main groups that dominate the workflow inside the tractor cabin were identified. All of them differ in terms of adjustment and usage time but define the basic workflow. This key elements were analysed for problems focusing on the direct interaction and as being a part of the overall agricultural workprocess.
