

1 LIVING ELEVATION
SCALE: 1/25

1 FLOOR PLAN
SCALE: 1/50

2 BATHROOM ELEVATION
SCALE: 1/25

This house is a modern and fresh design that is affordable for lower to lower-middle class. The single floor design will be fully accessible with open circulation allowing the home to be used by anyone. We have chosen blue materials and a soft color palette to help reflect healing and tranquility. Working from right to left, we focused on the placement of the different rooms. It was important that the bathroom was not only accessed through the bedroom, but also through the main living space. The laundry room is placed near the bedroom to reduce the walking distance and also serves as a storage space. This house will be a low maintenance environment that is easy to keep up and maintain.

4 Goals

- 1- Fully Accessible
- 2- Modern and Fresh
- 3- Promotes Healing
- 4- Can be used by anyone
- 5- Low Maintenance

Affordable Housing

This project was all about 'affordable housing.' The design was based around 5 goals: fully accessible, modern and fresh design, a space that promotes healing, an open floor plan that anyone could function in, and a home that is easy to maintain. These goals were accomplished by designing a floor plan that possesses a long open hallway stretching throughout the entirety of the home and careful placement of the daily necessities.
