

---

# *animal audible (hearing) ranges*

-since animals cannot speak, they must be trained to respond to certain sounds.

human 64 - 23,000 Hz

elephant

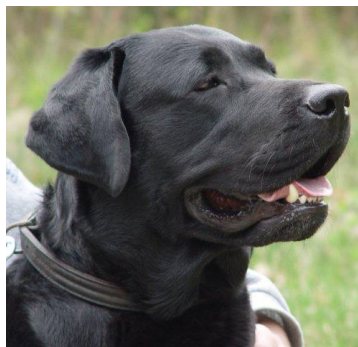

16 - 12,000 Hz  
- 50

low range

can detect lower sounds than humans

dog

67 - 45,000 Hz  
20,000 +

mid range

can detect sounds within and well above human range

mouse

1,000 - 91,000 Hz  
70,000 +

very high

can detect much higher sounds than humans

data from LSU
