

BMW Moto GP Concept Major Project - *to design a new sustainable type of motorcycle for the Moto GP race series for BMW.*

As part of the third year at University, the major project explores my ideas towards design. A new innovative, sustainable motorcycle for the Moto Gp race series for the brand BMW. Which incorporates a visually light weight design with a unique tank, with a hollow structure design feature to save weight. The motorcycle with use a powerful electric motor, along with highly efficient batteries instead of a petrol engine.
