

The background features a light green gradient with faint, concentric circular lines. Overlaid on this are several clusters of hexagons in various shades of green, ranging from very light to dark. The hexagons are arranged in a honeycomb pattern, with some clusters being more prominent than others.

project brief: to create an alternative for
notebook used by students

the act of taking notes..... or the art

equipment used

costs involved

- 5- subject notebook: Rs 190
 - Long size notebook: Rs 100
 - Paper pad: Rs 70
 - Loose sheets of paper: Rs. 50 (for 100 sheets)
 - Good quality pen: Rs 50 – 100
 - Pencils: Rs. 5
-
- a UG/PG students spends at least Rs 500 per semester
...not considering the money spent (invested) in photocopying notes

(considering tier 1 & tier 2 cities in India)

target segment

- number of college graduates per year: 20 lakh (2 million) [BBC Jan 07]
- number of students enrolled: 1961:17.9 million -- 1991: 72.4 million expected to be 100 million by 2011

core segment: UG & PG students

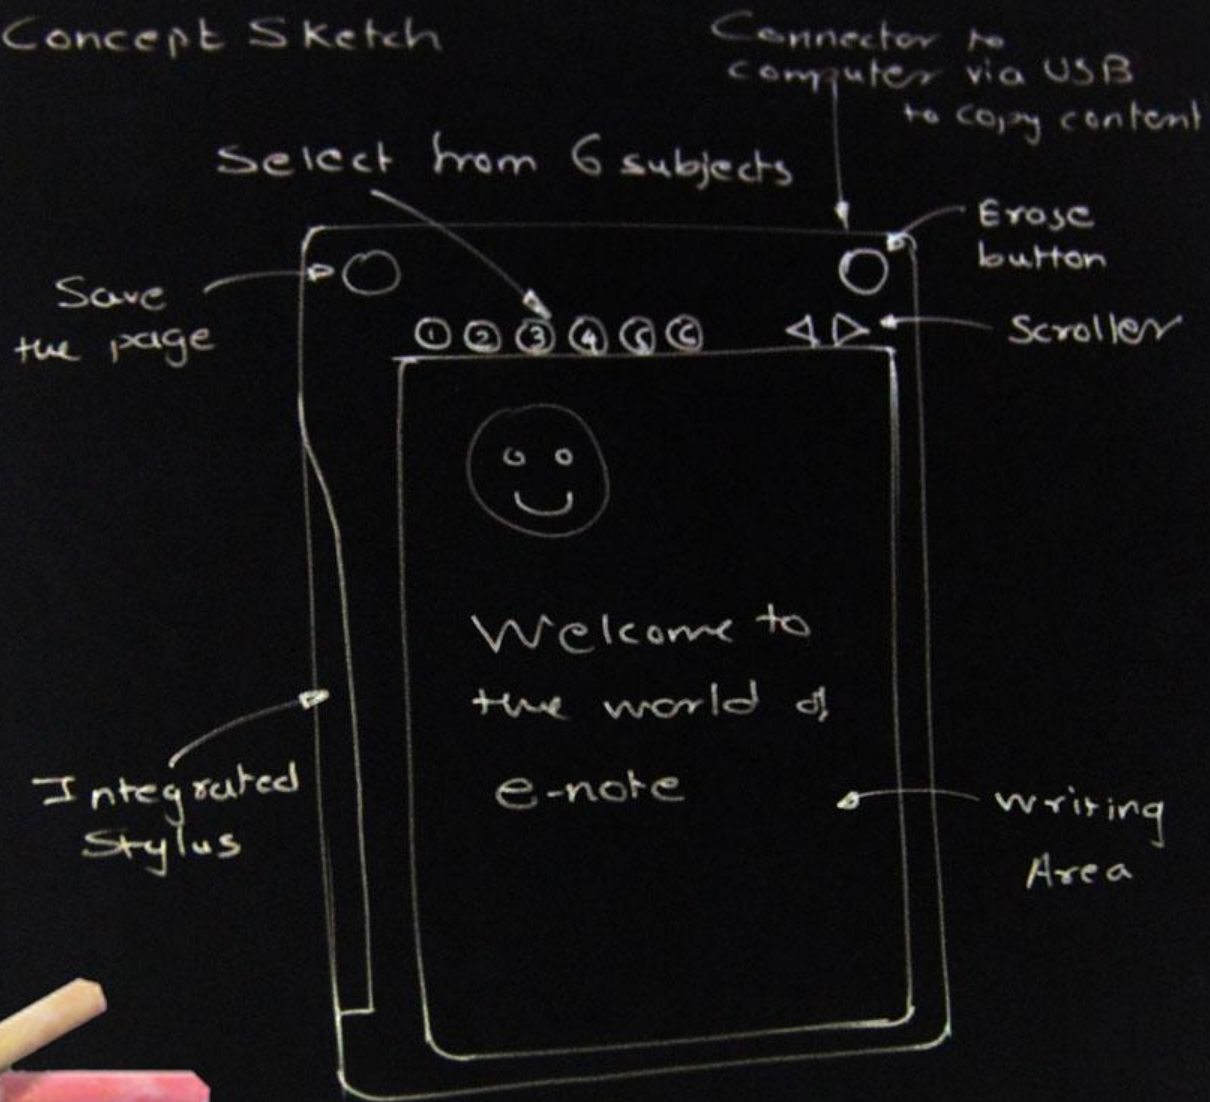

insight

- amount of papers and other stationary used up by all the students is humongous
- ecological damage: plastics, wood, paper; majority remains un-recycled
- weight carried by students for maintaining notes for each subject is large
- multi-subject notebooks uncomfortable to use (*not every subject involves same amount of writing*)
- damage to the written material is a threat

the solution

- using a pressure sensitive passive LCD which changes colour when pressure is applied.
- the LCD basically changes colour at the point of contact.
- this would allow for taking notes, drawing preliminary sketches, doodling, etc.

Rough Concept Sketch

key attributes

- saves screens as pages while you write as jpeg image files.
- user can copy this content to computer via USB
- user can select up to 6 subjects as in multi-sub notebooks
- has scroll buttons to read through pages
- charges via USB port
- has erase button to clear the screen
- thin plastic body case for slim passive LCD panel

how it will help

- reduce recurring costs of notebooks, pens
- zero costs for photocopying notes; simply transfer jpeg files to friends
- reduce wastage of paper

expected impact and sustainability of business

- Indian youngsters being early adopters
- the product will be a hit if at right price point
- the further growth will come from new designs adopted from various usage patterns of early adopters.... so users ➡ designers

alternative usage and markets

- replacement for paper based writing equipment
- notepads at conferences,
- e-note integrated into furniture e.g. tables of conference room, chairs in auditoriums, etc.
- tie-ups with furniture manufacturer to introduce such furniture
