

## Re- Analysis of the Conflict

I had gotten so caught up and excited about designing something really outstanding for the Cyptians that I overlooked a very important part of the conflict: their memori can't process the toxins. Therefore, in my continuation of product development for the Cyptians, I plan on researching new technologies and develop a wearable Cyptian memori filter that can allow the in-flow of water molecules, but protection against toxins. They could be the future fashion statement of Cyptia!

COULD BECOME NEW FASHION STATEMENT FOR CYPTIANS!!!

NEW CONCEPT FOR WEARABLE MEMORI FILTERS
