

DRENCH!

PROPOSAL:

The proposal is to deliver a product that will control the humidity level of the vegetable drawer and consequently prolong the lifetime of the items it contains. It will work alongside an application. It will be a portable unit compatible with existing fridge that will monitor and control the humidity level of the vegetable drawer by releasing vapour. A record of the food in the fridge will be recorded on the application. It will store an inventory of the contents and send reminders to users prompting them to eat food when it is approaching its best before date. Features will work in conjunction to reduce waste.

PRODUCT IN DOCKING UNIT AND STOOD ALONE.

BARCODE SCANNER STUCK TO FRIDGE EXTERIOR.

APPLICATION ACCOMPANIES PRODUCT.

POD WRAPPED AROUND CONTENTS OF VEGETABLE DRAWER.
