

GPS Technology: Convenient and Innovative

GPS (short for Global Positioning System) devices use satellite technology to pinpoint the user's exact location anywhere in the world. Typically, GPS devices are installed in vehicles or are handheld products. Virtually all GPS devices provide maps and detailed directions.

TomTom's feature-laden Go 910 is a great example of how far portable technologies have come. It has all the standard features you'd expect from a top-of-the-line GPS, plus a few surprises. Like text-to-voice directions, a built-in MP3 player and preinstalled maps that include the U.S., Canada and Europe.

Go 910 is portable, with plug-and-play technology to transfer from car to car. It also boasts a 4" anti-glare LCD touch screen. The backlighting feature automatically adjusts to external light conditions for day or night use. The free TomTom HOME software lets you manage your files, store information and even upload or download music files from your Mac or Windows-based computer.

For the less-demanding traveler, the Go 510 provides most of the basic features as the Go 910 at a fraction of the cost.

TomTom GO 910/510

- All-in-one portable GPS navigation
- Plug & Go: Works straight out of the box
- Easily move from car to car
- Easy-to-operate touchscreen; no awkward buttons
- Bluetooth™ connectivity; connect your GO to your mobile phone, headset, car speakers or headphones
- Plan your route to fit your requirements, such as: quickest shortest route, avoid toll roads, etc.
- Clear and accurate spoken and visual instructions: Easy-to-follow, calm instructions given with plenty of notice so you can focus on your driving
- Speeding alert: Alerts you when you're speeding, even if you're not in navigation mode
- Detailed maps of the USA, Canada and Europe, all pre-installed on a 20 GB hard disk
- GO 910 can announce street and place names and even read out your text messages; speaks 36 languages in over 50 different voices
