

The objective of this project was to design a new light.

What I wanted the light to do:

- Be a table Top light.
- Be made up of multiple pieces.
- Have each piece be individually powered.

Each light is a wooden frame with fabric stretched across the opening and then encased with frosted Plexiglas and wooden caps.

The Light blocks are of a size that could be stackable and yet stand alone. The largest light is only 7" tall and the smallest 4.5" tall.

The Block light set is made up of two rectangles, two cubes, and three cylinders. This allows for the lights to be mixed and matched and stacked in many different positions.

Each block is individually powered by a 9 volt battery that illuminates a ribbon of LEDs. This allows the block to emit a soft vibrant glow while using very little power.
