MetroPaws® "Poopcase" Bag Dispenser

MetroPaws® produces designer dog waste bags wanted their own dispenser to sell with it.

Working with the owners, I was able to design the shape they wanted and ensured the proper dispensing of the dog waste bag. Following a series of sketches and computer models several possibilites were reviewed and with the help of MetroPaws® senior management we finalized a design.

The final product is an injection molded case made up of two parts with a hollow cavity. These are then sealed together using an adhesive. New bags are inserted via a slit in the back that is opened by squeezing the two ends together. When needed, bags are pulled out through the dog bone cut out. The case attaches to a leash or belt with a carabineer clip.

This product is currently being sold nationally by MetroPaws®.
