save is redundant -
and saves any pages
updates

Product Metadata Detail

SAVE PROMPT if user does not SAVE updates to metadata - 6/12

The screenshot shows the VISA Developers Admin Panel. At the top, the VISA logo and 'Developers' text are on the left, and 'Logged in as: John Weather' with a 'Logout' button are on the right. The main content area is titled 'Admin Panel' and 'Product <Name>'. A sidebar on the left lists navigation options: Users, Approval Queue, API Resources (REST), APIs, API Categories, Products (selected), and Static Content. The 'Products' section is expanded to show 'Product <Name>'. The main content area is titled 'Product <Name>' and contains the instruction 'Define configurations to create and/or edit Product metadata.' Below this is a 'REQUIRED INFO' section with form fields for 'Product Name', 'Brand Name', 'Terms & Conditions' (checked), 'T&C Name', and 'T&C URL'. A 'Save Updates' modal dialog is centered on the screen, with the text 'Save Updates' and 'You must save updates made to this metadata page.' Below the text are two buttons: a yellow 'Save' button and a blue 'Cancel' button. At the bottom right of the page, there are 'Cancel' and 'Save' buttons.
