

Zebra

Zebra

There is no mistaking what you're seeing when you spot a horse-like animal with black-and-white stripes: it's a zebra. And each zebra has its own unique pattern of those distinctive stripes, just as humans have their own unique pattern of fingerprints.

Fun Facts

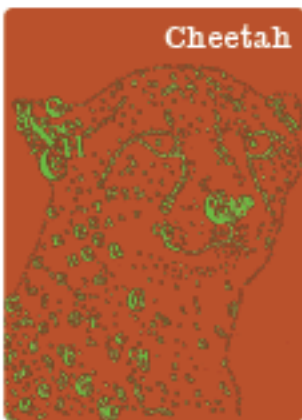

- * A group of zebras is called a herd.
- * Zebras live in parts of Africa.
- * On average, a zebra in the wild lives 25 years.
- * Zebras belong to the horse family.
- * A zebra can run up to about 35 miles per hour.

Tiger

Cheetah

Panda

Tiger

Belly stripes help to break up a tiger's stripes with dark stripes, the tiger is the largest wild cat in the world. The big cat weighs up to 700 pounds (317 kilograms), stretches its feet (2 meters) long and face 1.6m (5.2m) long and the powerful predator generally hunts alone, able to bring down prey such as deer and wild boar.

Fun Facts

- * There are five tiger subspecies, very rare.
- * The scientific name for the tiger is *Panthera tigris*.
- * The tiger has exactly the same pattern of stripes.
- * Tigers hunt at night. They can see really well at night.
- * It's surprising a tiger can live to be 30 years old.

Cheetah

Recent research on just the cheetah's sprinting speed of 60 mph (97 km/h) demonstrates how fast cheetahs are when it counts. These cats prey on only about half that speed. However, the cheetah's incredible speed makes it a fast prey during the day. Sometimes it preys on high places and watches for prey.

Fun Facts

- * Adults always weigh from 60 to 140 pounds.
- * Cheetahs are small, so most live in savannas.
- * Cheetahs live and hunt mostly in open grasslands.
- * Female cheetahs usually bear down to the side in a litter.
- * A cheetah's head and body grow to 44 to 53 inches.

Panda

Panda pandas they don't resemble any other bears. They are the only bear species to eat bamboo leaves. As a panda matures its black, red, and white fur and lighter spots become stripes. The panda's face remains black.

Fun Facts

- * Giant pandas may live to be up to 20 years old in captivity.
- * How the eye of its head giant panda legs to bear cubs.
- * Young pandas stay with their mothers for up to 18 months.
- * Giant pandas weigh 800 to 1,200 pounds.
- * Western pandas weigh only 300 to 400 pounds.
