OUR IDEAS. YOUR HOME.

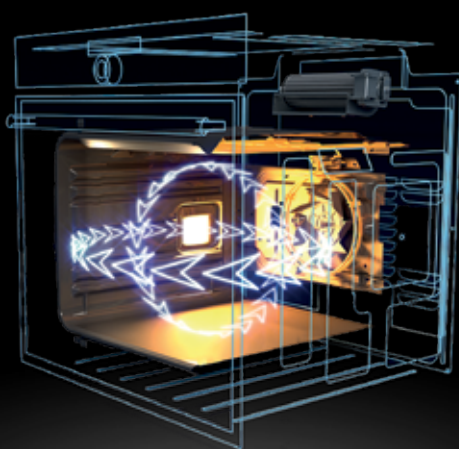

Ariston brand perfectly combines tradition and innovation to create a new generation of products

Ariston appliances are ergonomic, silent, intuitive and safe, and offer intelligent solutions and maximum comfort in every room in the home. Soberly sophisticated style, ecological responsibility and constant commitment to quality and innovation: Ariston appliances for washing and looking after clothes, cleaning tableware, preserving and cooking food fully reflect the unique personality of every home and every room, whilst guaranteeing the highest standards of efficiency, lower consumption levels and excellent performance.

WELCOME TO THE AGE OF HIGH DEFINITION

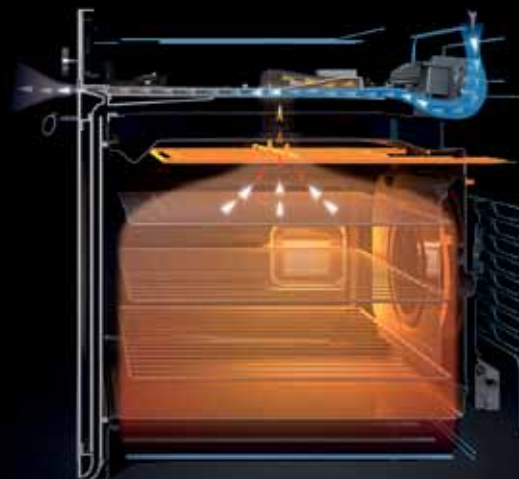

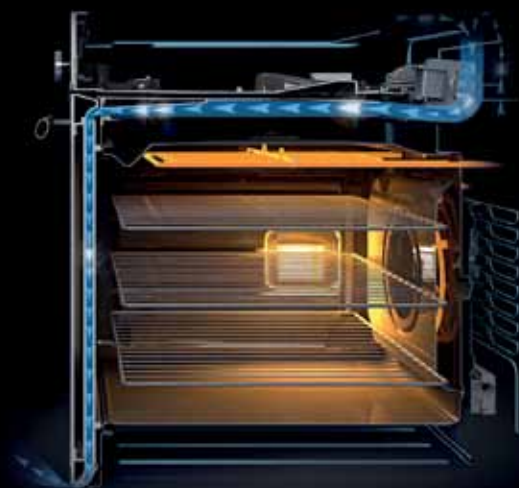

Perfect cooking is easy to achieve, thanks to the constant circulation of heat ensured by the sophisticated electronic device which manages the cooking cycles. High Definition Cooking means completely uniform results on every cooking level. With the Dual Flow System, patented by Indesit co., the fan located inside the cavity creates two separate air flows to ensure even cooking.

DUAL FLOW SYSTEM

The exclusive Dual Flow System is a device which uses the dual channelling of the air from the chimney and the ventilation fan to ensure uniform warm air circulation and keep the temperature of the oven door lower than traditional ovens, for increased safety, particularly in the presence of children.

Cold air collected from around the oven and drawn in by the fan is divided into two flows. The first extracts warm air from the chimney and pushes it out of the oven. The second airflow, in a parallel channel, passes inside the door, cooling it, and then exits via a deflector located below.

CLASS A-20%, THE LOWEST CONSUMPTION IN THEIR CATEGORY!

Ariston ovens boast energy consumption which is 20% lower than the current class A, an exceptional result achieved thanks to Ariston's continuing commitment to protect the environment. Thanks to the electronic control of the heating elements and fans, to the fan cooling system and the improved cavity insulation, Ariston ovens offer up to 0.63 kWh energy consumption, the lowest in their category.

Improved electronic control
of the heating elements

Improved fan management

Optimised management
of the cooling fan

Improved thermal insulation

= E 0,63 kWh

Category: ovens of average dimension, with a capacity between 35 and 65 lts; comparison done with 29 competitors' products, based on the information published in their official catalogues until 31.12.2010

DUCTED OR RECIRCULATION HOODS

There are two different types of cooker hoods: the ducted hood for external evacuation and the recirculation hood for internal filtering. The first type is the most efficient, as it effectively purifies the air, but this option does require a direct external outlet. The filter hood, in contrast, can be installed anywhere, and extracts steam and odours which rise from the hob, purifying them using a series of filters before rereleasing them into the environment. As long as the filters are regularly replaced, these hoods ensure excellent results.

FILTERS

Ariston hoods have two types of filter: one for grease and a second for odours, the latter of which is present only in recirculation models. The grease filter captures particles of grease and keeps hold of them, preventing them from entering the hood and reaching the motor. The anti-grease filter can be easily removed and washed in the dishwasher. The anti-odour filter on the other hand, serves to purify the air and is usually located in a plastic container containing granules of active carbon, a natural substance which absorbs grease, odours and humidity. By regularly replacing the active carbon filters you can be sure that your air will continue to be efficiently purified, making your time in your kitchen much more pleasant.

In accordance with our philosophy of quality, which always guides the selection of our materials, Ariston uses only the highest quality, rustproof aluminium or stainless steel filters.

MAINTENANCE

Maintaining your Ariston hood is extremely simple and practical. The anti-grease filter can be removed in just a few seconds and washed in your dishwasher, and the replacement of the active carbon filter is just a click and does not require any special intervention. The active carbon filters must be replaced every 3-4 months to ensure the motor continues to run efficiently. It is important to remember that correct use of the hood reduces its operating noise. Simply follow a few simple steps to reduce noise. For example, we recommend you switch on the hood at the lowest speed as soon as you start cooking, and then increase it once steam and odours intensify, then finally return to minimum speed and leave the hood running for another 5 minutes once you have finished cooking.

INSTALLATION

The rules to be followed for correct assembly of your hood are few and simple:

- The hood must be fixed centrally above the cooking hob.
- The minimum distance between the hood and the hob must be no less than 65 cm for electric hobs and 70 cm for gas hobs. We recommend that you do not exceed a maximum distance of 75 cm.
- The outlet pipe should be as direct as possible and should have the same diameter as the flange. Moving the air column contained in the evacuation chamber will lead to a loss in efficiency which is compensated for by increased hood power.
- The hood must be installed away from air currents.
- The evacuated air must not be channelled into the same channel used for the outlet of steam from other appliances.

GAS HOBBS

Your hob is one of the central elements of your kitchen, the most used and the most important. That's why it's crucial that your hob blends harmoniously with the style of your kitchen, that it matches your other appliances and that it offers efficient solutions to meet all of your cooking and design needs. Ariston's collection of gas hobs will meet all of your needs. Choose from a state-of-the-art range of products in terms of use, appearance and variety. Hobs in different shapes and sizes which offer contemporary lines and high quality materials to suit the unique style of any kitchen environment. As well as its innovative Luce gas hobs with Direct Flame burners, Ariston is pleased to offer you its new collection of 90, 60 and 75 cm hobs. Their larger dimensions mean you can benefit from an increased cooking surface, for easier preparation of your dishes compared to a standard 60 cm hob.

GAS CONTROL

All Ariston hobs are fitted with the Gas Control device integrated into the burners, a safety system which stops the flow of gas if the flame is accidentally switched off.

IGNITION

Switching on a Ariston hob only takes one hand, making every operation quicker and safer.

SPECIAL BURNERS

DOUBLE CROWN-DOUBLE REGULATION BURNER (DCDR)

A powerful burner for better cooking in less time. The flame can be adjusted independently on each crown – from 0.4 to 5 kW – and the same burner can be used for making coffee, for a small frying pan or a large pot, simply adjust the power of the flame.

TRIPLE CROWN

The special Triple Crown burner makes the most of its power, generating even heat for quick and efficient cooking. Its innovative structure ensures the optimum spread of heat below the pan, reducing preparation times.

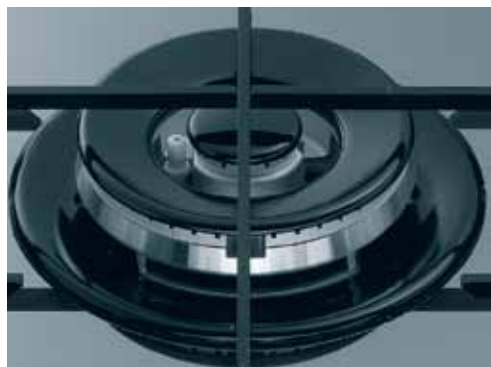

DOUBLE FACE

There's no more flexible burner than the Double Face, which with its two rotating elliptical flames, adapts perfectly to the shape of your fish kettle or your larger rectangular trays but is also ideal for your smallest pans. The two burners can be used together or separately.

DOUBLE CROWN

With 3.5 kW of power and perfectly even heat distribution under your pan, the Double Crown burner cooks any dish quickly and to the highest standard.

INDUCTION HOBS

Induction cooking ensures quick and uniform results, easy cleaning and complete safety. This state-of-the-art technology is based on the generation of a magnetic field between the cooking surface and the metal base of the pan, which produces energy which is immediately transformed into a homogenous heat source distributed only inside the cooking vessel.

This specific feature prevents the dispersion of heat, thus reducing cooking times.

Recognisable by their modern and elegant design, induction hobs blend perfectly with your kitchen tops and are easy to clean, thanks to their smooth, cool, glass-ceramic surfaces.

TOUCH CONTROL

The front position of the **Touch Control** panel makes using your Ariston hob even easier. Using the Touch Control panel, you can adjust the heat of each cooking zone precisely and independently, selecting your temperatures and functions with a simple touch.

BOOSTER

Using the **Booster** function, you can reach higher temperatures in just a few moments and complete your cooking even more quickly. When the Booster function is activated, the heat from the plate is increased to a maximum for 4 minutes, meaning quicker cooking which remains just as tasty and accurate.

EASY-CLEANING

Induction hobs are completely smooth and always cold, making them very easy to clean.

Accidental spills won't solidify, all it takes is a damp cloth to remove any food residue, and this can even be done immediately, with no risk of burns.

TIMER

Using the Timer, you can set the automatic switching on and off of all the zones, up to 99 minutes.

SAFETY

Ariston's induction and glass-ceramic hobs are equipped with safety devices which make them easy and safe to use.

PAN DETECTION

The plate only activates when in contact with the pan, while the rest of the surface remains cold.

SELECTIVE DETECTION

Thanks to the selective detection feature, the plate is only activated upon contact with specially adapted pans. If a small metal object such as a spoon comes accidentally into contact with the plate, the selective detection is not activated. An acoustic warning will sound in the case of any anomalies.

TIME LIMITER

If the plate is mistakenly left on, a device will switch it off automatically.

CHILD SAFETY

To avoid the programmed Touch Control commands being accidentally changed, or to stop children from activating them, all Ariston induction and glass-ceramic hobs are equipped with a safety lock.

RESIDUAL HEAT INDICATORS

Ariston's glass-ceramic hobs are equipped with special warning lights which indicate if a zone is still warm once the hob has been switched off. The indicators switch off automatically when the temperature falls below 60°.

BOIL OVER CUT-OUT

On glass-ceramic hobs, the boil over cut-out device automatically switches off the hob when a liquid accidentally boils over from a pan and reaches the controls. As well as switching off the hob, the device also sounds an acoustic warning. If a metal object accidentally comes into contact with the hob in error, the safety device issues an acoustic warning and automatically switches off the hob.

IT'S GREEN

All Ariston glass-ceramic and induction hobs are manufactured using special "It's Green" glass-ceramic, produced in a process which doesn't use arsenic or antimony, just one more example of our attention to the environment and the health of our population.

SPECIAL PROGRAMS

PIZZA

Is it possible to cook a perfect pizza at home that is as tasty as one cooked in a wood-fired oven? Yes, with the new Ariston cooker! The pizza program permits temperature variations that grants the same results that a traditional wood-burning oven provides: perfect cooking inside and outside, in only 30 minutes. You choose from the "menu" in Ariston's recipe book and ... you get the pizza you want!

MULTICOOKING

Perfect for food that need a gratin or a long cooking time. It activates all the necessary heating elements. It's possible to even cook different dishes simultaneously on 2 shelves.

DOUBLE CROWN DOUBLE REGULATION

The new double crown double regulation allows you to cook better and in less time, achieving maximum flexibility and efficiency. The flame can be regulated separately on each crown and the burner can be used for pans of any size, from a coffee maker to a large pan for cooking pasta.

TRIPLE RING

The exclusive Triple Ring burner takes full advantage of an excellent power distribution and guarantees quick and even cooking. The innovative flame distribution allows to have an excellent heat distribution under the pan.

DOUBLE FACE BURNING

It is made up by two burners that can be rotated and used simultaneously. It is suitable for rectangular baking tins and small pans.

ONE-HAND IGNITION

One-hand ignition, allows you to turn on and regulate the flame by a simple pressure and turning of the knob.

CAKES

With Ariston's recipe book and this extraordinary function you can turn out perfectly-shaped cakes, and perfect sweet delights with a golden crust on the outside, and soft and perfectly cooked within, thanks to a specific cooking program catered to "sweet treats".

GRATIN

Perfect for mixed kebabs, sausages and spare ribs. You turn on the superior heating element and the fan will operate. This prevents the surface of food from burning.

BARBECUE

Perfect for dishes that require a high surface temperature like steaks and hamburgers. You turn on the upper central heating element and the high temperature enhances and allows for immediate cooking of the food. The food is cooked by radiation heat.

FUNCTIONS

HOLIDAY

When you are away for a longer period of time or on holiday you can keep your refrigerator switched on without any worries, and still save a considerable amount of energy. While the freezer keeps working normally keeping the foods frozen, the refrigerator has a stand-by temperature through keeping the doors closed, which also keeps the interior clean without risk of mould or bad smells.

SUPER COOL

The Super Cool function has been designed especially to cool down large quantities of food in a short time. It's very quick and it deactivates itself once the temperature of the foods reach the ideal level.

SUPER FREEZE

Super Freeze on the other hand makes sure that the temperature of the freezer is lowered which allows you to freeze foods and produce ice cubes on record time. When the freezing is done the temperature returns to the programmed level.

DUAL CONTROL

Double Cold Independent Combined provides this useful function that allows an electro valve to: - set up separately fridge temperature and freezer-like traditional two compressors Combos.

The advantage is that in winter you can set a higher temperature to avoid drinks becoming too cold, without modifying the freezer temperature.

- To be sure that temperature will not oscillate due to the new innovative electronic system. Also it reduces noise due to the presence of only one compressor.

HYGIENE ADVANCE

The same care that is taken for selecting foods when shopping Ariston has put into the conservation of these foods in perfect conditions and the most hygienic way. To protect the food better, the internal walls of the new Ariston refrigerators have been covered with a special permanent film that prevents the formation of mould or bacteria.

From now on with Hygiene Advance, the refrigerator at home will really be the best place to keep your foods fresh.

PROGRAMMES

ULTRA INTENSIVE

This program is even more energetic than traditional intensive programs. Ultra Intensive further ups the pressure and maximum temperature for wash cycles that get rid of even the most stuck-on dirt, like that found on oven pans.

DUO WASH

This program was designed for those needing to wash two types of dishes together. Duo Wash lets glass and steel get two different treatments in a single program. Care for glasses and the most delicate pieces in the upper rack and energy and power for the pans and stuck-on dirt in the lower rack.

SPECIAL GUEST

A cycle conceived to quickly fresh up the “good set of dishes” in only 36 minutes, ideal when you want to give your guests the best treatment.

BABY CYCLE

A program specifically designed to respond to the needs for optimal safety and sanitation in washing baby's dishes. This cycle is the optimal solution to clean baby bottles, pacifiers, plates, pans and silverware, and is certified by independent laboratories and the University of Turin.

SPEED 25'

This is the perfect program to wash dishes for four people in an hour, including a large pot and a small one. All in just 60 minutes and with A Class safety.

DAILY A 60'

Permette di lavare le stoviglie di 4 persone, oltre a una pentola grande e una piccola, in soli 60 minuti e con consumi in classe A.

OPTIONS

SHORTTIME

This option lets you wash a full load of dishes with flawless results in record time. It cuts down the program length by 30%. The combined power of the Flexipower with temperature adjustment can wash and dry a full load in A Class in extra short times.

HALF LOAD

If you have the dishwasher only half loaded, but you don't want to wait, Half Load Up or Down allows to load either the upper or the lower basket, thus saving time, water and energy.

TABS

It is the first option in the market specifically conceived to optimize the use of detergent tabs. This option improves washing and drying performances guaranteeing uncomparable cleanness and brightness.

DELAY TIMER

Thanks to the Delay Timer, you can delay the cycle start by up to 24 hours. The wash can start in any moment of the day, even when you are not at home.

14 PLATES

The upper rack has four rows of adjustable inserts for optimal loading flexibility. The new dish-separating grate can be dropped quickly, making the bottom rack totally flat to accommodate bulky dishes. Taking away the silverware basket can make room for an additional 14 plates.

GOODNIGHT

In order to gain a perfect silence Ariston made the GoodNight option that reduces noise even further. This means the dishwasher can even be used at night, without disturbing sleep or the neighbours, making full use of the advantages of night time rates when there is differentiated rate for electric energy.

DESIGN, ERGONOMICS AND FUNCTIONALITY

Ariston has revised the design of its new washing machines and washer dryers to improve functionality and ergonomics. The new appliances therefore offer a greater loading capacity, thanks to the larger inner door, the easier to read control panel and the rotating detergent drawer that helps dose the products correctly.

NEW FRONT PANEL, MORE SPACE FOR PROGRAMMING

The control panel is 13 centimetres higher, compared to previous models. Thanks to the larger surface area, there is better readability for selecting and programming cycles and functions with ease.

LOADING OPENING: THE LARGEST ON THE MARKET

The new washing machines and washer dryers have the largest loading opening on the market, 34 cm in diameter, to make loading and unloading your laundry more convenient. The outer diameter of the hole has also been increased, giving a greater quality impact to the appliances.

NEW ERGONOMIC HANDLE

The shape of the handle has been redesigned to make it even more ergonomic and give it extra strength.

ROTATING DRAWER WITH DISPENSER

The drawer no longer has to be pulled out, but rotates on itself, facilitating the insertion of detergent. In addition, thanks to the Easy Dose wall, it is easier to pour in the right amount of liquid detergent.

INCREASED LOAD CAPACITY

The new Ariston washing machines offer up to 10 kg of load capacity and a huge 10 kg washing capacity and 7 kg drying capacity in the washer dryers.

NEW COLOUR VERSIONS

The attention to details is also found in the colour options offered by the new range of washing machines and washer dryers. It is possible to choose the colour of the profile from three options.

A RANGE OF PROGRAMS TO SUIT YOUR EVERY NEED

In addition to the traditional programs, New Aqualtis offers a new range of specialized cycles and options, to guarantee just the right program for every fabric.

Washing machine

Shirts

This program allows you to wash shirts with the utmost care and to dry them so as to make them easier to iron, because the gentle movement of the drum and a jet of cool air prevent creases from forming.

Washing machine
Washer dryer
Tumble dryer

Jeans

A cycle conceived for your best-loved garments: wash at 35°C and dry with a special heat and drum cycle to protect colour and maintain the fit and structure of every type of denim garment, thus ensuring a perfect washing and drying result.

Washing machine
Tumble dryer

Duvet

Designed to allow you to wash your duvets at home, this cycle is also ideal for gently washing bedcovers and blankets, using just the right amount of water. What's more, the corresponding tumble dryer program provides deep, gentle drying which takes extra care of the item's padding.

Washing machine
Washer dryer

Tumble dryer

Baby

A washing and a drying cycle conceived to take care of all the most delicate baby garments. The wash tackles typical baby stains and removes all traces of detergent from clothes, helping to protect delicate baby skin thanks to specially programmed wash settings and added water usage during rinsing phases.

Due to fewer drum rotations during the drying cycle, the temperature inside the drum remains stable, reducing the drying time and leaving clothes soft.
