Customer Relationship Management (CRM) Softwares ▪

We develop CRM web and Desktop applications which can be accessed through your Desktop, Browsers and Mobile phones.

As you can see there are number of reasons why any business would choose to use customer relationship management, and there are more. Using CRM provides numerous benefits to both businesses and customers and that is why so many businesses use CRM.

Customer relationship management is a widely implemented strategy for managing a company's interactions with customers, clients and sales prospects. It involves using technology to organize, automate, and synchronize business processes, sales activities, but also those for marketing, customer service, and technical support. Customer relationship management describes a company-wide business strategy including customer-interface departments as well as other departments

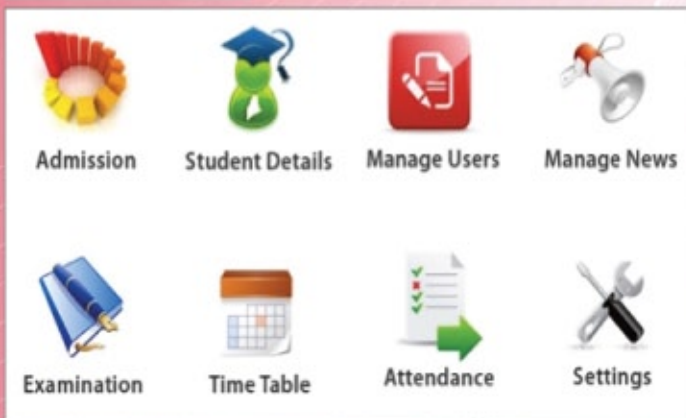

- Track customers through different stages of sales cycle right from prospecting till closure to know their exact status.

- Create sales territory to track and segment your sales completely.

- Email and Calendar Modules make sure that you are always up to date while being with your customo mers and gives you a flexible tool for sales.

- Manage post sales activities and customer service and many more things.

A CRM software will play a major role in the success of your corporation which in turn helps the growth and profitabil-

The power of a CRM lies in its ability to centralize customer data and automate many of the tedious tasks in managing sales, marketing, and customer service so that users can become more successful by spending more time helping their customers and less time on administrative tasks. For that reason we are including and implementing many other useful things in our CRM tools

School Management System (SMS) Softwares ▪

- Billing and Payment Collection, financial data report

- Pharmaceutical Manangement

- User interface instructions and usability guidelines

- Security Level, Management reports and Accounting

- Staff Details and salary reports .

Human Resource Management (HRM) Software ∎

HR management software as the name suggests deals and manages complete details of the employees of an organization. Companies have been using such applications on a large scale as it efficiently aids in data management of employees and various HR processes.

However, with the increasing amount of data, there was a need to the systems to be automated. HRM Software suitably integrate HR management and information technology, thus helping in planning and execution of automating HR processes. Human resource management software forms a part of enterprise resource planning (ERP) application also, which makes it possible for other modules of financial applications to be integrated with it as well.

It's necessary to manage, administer and minimize the costs, and reduce the complexity of people and performance management. Some of the major areas where human resource management software is effectively used are:

- Payroll
- Work Time
- Benefits Administration
- HR Management Information System
- Recruiting
- Training / Learning Management System
- Performance Record
- Employee Self-Service

The **Payroll Module** automates the pay process by gathering data on employee time and attendance, calculating various deductions and taxes, and generating periodic pay cheques and employee tax reports.This module can encompass all employee-related transactions as well as integrate with existing financial management systems.

The **Work Time Module** gathers standardized time and work related efforts. The most advanced modules provide broad flexibility in data collection methods, labor distribution capabilities and data analysis features. Cost analysis and efficiency metrics are the primary functions.

The **Benefits Administration** module provides a system for organizations to administer and track employee participation in benefits programs. These typically encompass insurance, compensation, profit sharing and retiremen

The **HR Management Module** is a component covering many other HR aspects from application to retirement. The system records basic demographic and address data, selection, training and development, capabilities and skills management, compensation planning records and other related activities.Human resource management function involves the recruitment, placement, evaluation, compensation and development of the employees of an organization. Initially, businesses used computer based information systems to:

- Produce pay checks and payroll reports
- Pursue Talent Management
- Maintain personnel records.

Online **Recruiting** has become one of the primary methods employed by HR departments to garner potential candidates for available positions within an organization. Talent Management systems typically encompass:

- Analyzing personnel usage within an organization
- Identifying potential applicants
- Recruiting through company-facing listings
- Recruiting through online recruiting sites or publications that market to both recruiters and applicants.

The **Training & Learning Management System Module** provides a system for organizations to administer and track employee training and development efforts. allows HR to track education, qualifications and skills of the employees, as well as outlining what training courses, books, CDs, web based learning or materials are available to develop which skills.

The **Performance Record** allow managers to approve training, budgets and calendars alongside performance management and appraisal metrics.
The **Employee Self-Service Module** allows employees to query HR related data and perform some HR transactions over the system. Employees may query their attendance record from the system without asking the information from HR personnel. The module also lets
