

# Chosen Direction

A live **captioning** device to include and empower the user.

The combination of speech translation technology and a modern blue tooth microphone, facilitate the user by providing an application that translates spoken word into a live caption feed.

## iPhone Integration

To simplify the user's daily necessities, this solution uses Apples' Iphone platform to run a live caption application.

## Bluetooth Microphone

The live caption feed is provided from a detachable blue tooth This provides a superior, long range solution to the applications that rely on the Iphone's on-board microphone.
