

Sally is approached by her young son who is hungry.

Sally walks up to her kitchen counter and activates the embedded screen.

Sally's **Google Cooktop** displays two options for recipe selection. Either her **Google Cooktop** will wirelessly connect to Sally's **Google Cooking App** on her iPhone that has a catalog of the ingredients she has in her home and then suggests a recipe or Sally can search the internet.

Sally then selcts the profiles of those who will be attending dinner. These profiles are connected to the **Google Cal Band** which allows the **Google Cooktop** to access daily exercise and suggest an appropriate portion size.
