

# CONCLUSIONS

- It was hard to think of corrugated paper as a structural element
- I tried to use the material in a way that was natural to itself
  - That is make a chair from cardboard not make cardboard act like another material
- The direction in which the flutes ran played a large role in how the material was used
- It is hard to bend and fold against the flute direction
- Measure twice and cut once!!!
- A sharp blade makes all the difference...
