

This project required me to work with an additional team member. I assisted with creating the presentation of the scale foam model that was later presented during the final presentation (pictured above).

I collaborated with my team member to come up with design solutions. We discussed the requirements of the neighborhood. I was required to help come up with a design that was influenced by a designer. We choose to do Michael Graves

During the design process, my team member and I came up with design solutions that was inspired by Graves many curves and different textures.

These are images of the boards that were presented in the final project.
