

Final Design

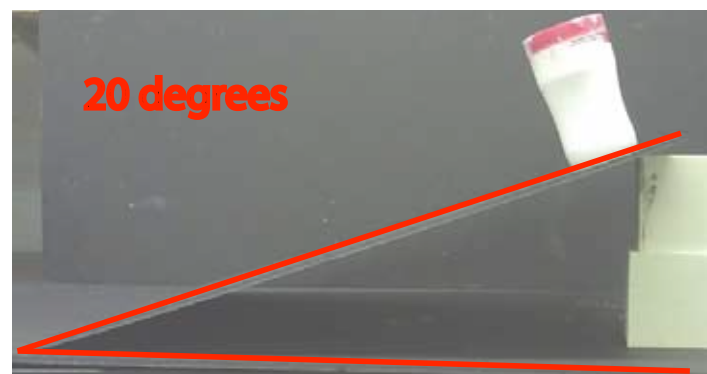

Venting Lid

The lid opens vent while microwaving, then snaps shut to avoid spilling on the user while eating.

Cup Form

This new cup form fits better in the hand and tips over less easily.

The new cup is much safer; research showed that the improved form could be tipped 15.5 degrees further without falling.

Tamper Seal

A pop-tab seal requires less surface area and therefore has a smaller lip on the cup, which doesn't trap noodles like the current design.
