## PD 350- Winter 11

### Assignment 1

#### 1. What specific material/s do you foresee yourself using as a designer?

I am interested in sustainable design (green design). After taking PD 199 I took my first look at the materials that we use to make things. When making a product you have to think about how the product is going to break down, and as I learn more I find myself becoming more environmentally conscious. I foresee myself using materials that are ecofriendly and natural. I foresee myself using high quality metals like silver and gold, stones, bamboo fiber, soybean fabric, and organic cotton.

#### 2. What manufacturing process/es will you use to make products?

I plan on making products by hand as well casting with metal. There are endless opportunities for design through casting, I want to learn about centrifuge casting. Making molds is extremely intriguing and I can mass produce with molds.
