

DESIGN DIRECTION

For conceptual design purposes, we considered the core functions of the building, it's toilets, storage rooms, elevators and lobbies, open and closed working areas etc.

Firstly we solved the floor plan by creating **practical** and **pleasing relationships** between **core** spaces and primary **working** spaces.

Given the **architectural characteristics** of this building we have strategically chosen to **conform** to the structural **language**. **Strong and straight** sight lines create direction and unobstructed footfall throughout the space on the 6th & 7th floor.

For us to **effectively** plan your new workspace, our initial task led us to create a hierarchy diagram. With this diagram we were able to effectively design our space plan.
