

Phone Integration

Through the micro USB port in the device, data can be uploaded to your phone. The phone can also control certain features in the device. Finally, if a wireless insulin pump is used, your phone can send bolus information to that pump so that insulin can be delivered wirelessly.

Revolve Diabetic Phone Application

Store glucose level history and bolus history

Use a food library to calculate bolus

Create basal programs to constantly deliver insulin

Send bolus information to wireless insulin pump

Parent with app can track child's glucose levels
