

# IOS/Android Electronic Maracas

Whilst on the move the child becomes uncomfortable...

Parent/Guardian is able to load up 'Maraca App' and connect to the handheld toy...

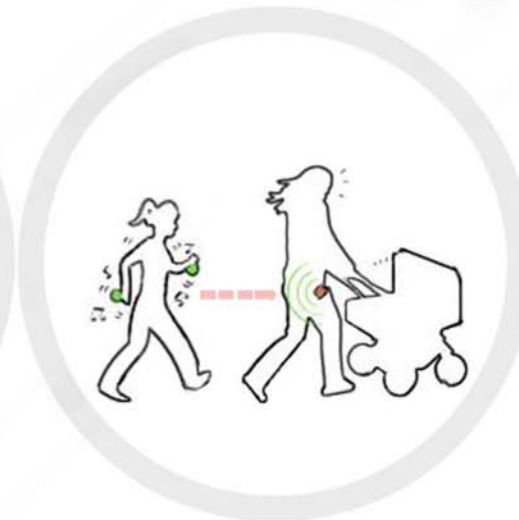

Handheld Maraca is given to the toddler & connected to the IOS/Android Mobile...

Toddler stays close in order for the Maraca to release sound and musical themes. They simply 'hold n shake'...

Parent/Guardian mind at ease because they can hear and control the child's entertainment & walking...

Toddler simply shakes and dances within range sound to be released from the Maracas...

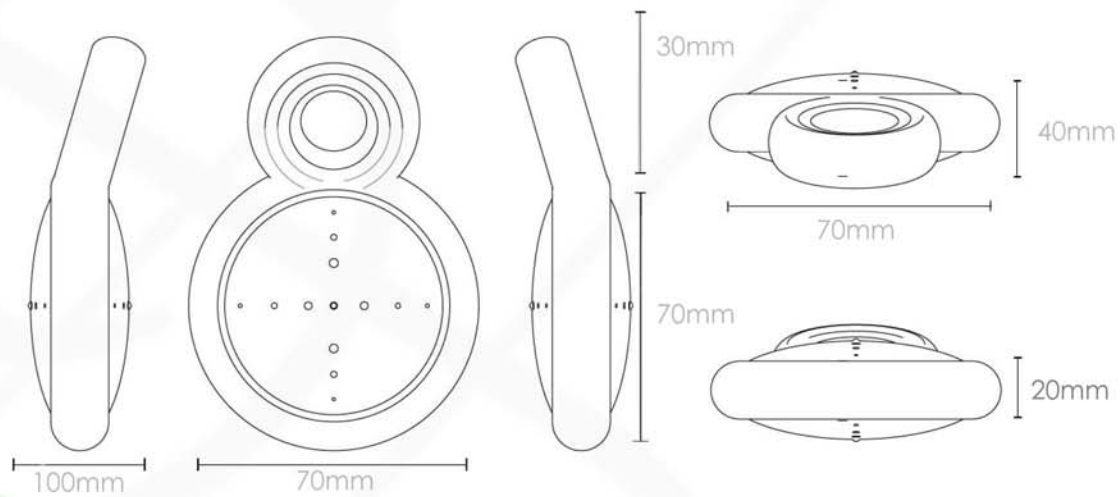

### What is it?

Simple easy to use children's electronic maracas are designed to educate and entertain young children whilst on the move. The user installed 'Maraca App' connects to the portable maracas and only releases sound when positioned close to the Mobile device via walking and being alongside the parent. The electronic maracas provide peace of mind for the parent/guardians whilst on the move that their child is close by, and entertained. Maracas App provides essential information regarding the movement, sound and selected noise settings of the maracas held by the child. The App allows simple updates and downloads to continuously amuse the child. Maracas become an essential purchase that helps educate, entertain and exercises your child whilst on the move. Maracas demonstrates travelling, learning and safety...

### How does it Work?

The maraca device is an injection moulded polymer product. Inside will be an integrated PCB with wireless signal incorporation allowing the mobile app to transfer and act as a 'remote control' for the maracas. Sound, movement and voice recording features will all be visible upon the mobile application when the toy is in use. This product is compatible and uses IOS or Android technology. All of these devices all have incorporated GPRS/Wi-Fi and or Bluetooth features. Sound will only be released from the child Maraca when they are within range of the mobile device for a strong signal to path through one another. Sound, movement and download theme options can all be remote controlled through the mobile application. This product provides an ideal solution for families on the move. More specifically it resolves many issues associated with transporting and social awareness.
