

# SO, YOU WANT TO BE A LIBRARIAN

*Many people who love reading are interested in becoming a librarian, but the job requires much more than an appreciation of good books.*

Librarians are keepers and disseminators of knowledge. They organize information and develop new, creative ways to make it accessible to others using the latest technology. Depending on what specialty they choose, librarians may have responsibilities as varied as running public education programs, conducting research at top universities, teaching children to love reading or managing library employees. Read on to find out more about the different facets of library science, the educational path librarians must travel, and the final steps you'll need to take before earning the title of librarian.

The study of library science includes library management, the preservation, archival, and dissemination of information, the development of information technologies, and research education.

Many people who love reading are interested in becoming a librarian, but the job requires much more than an appreciation of good books. Good librarians have a passion not just for knowledge, but for finding the best way to organize it. They're concerned with preserving information and making it
