Important Safety Information for Patients

The following are not all the possible risks for Divigel®. Please read the full Patient Information leaflet and talk to your healthcare provider.

Estrogens increase the chance of getting cancer of the uterus. Report any unusual vaginal bleeding right away while you are taking estrogens. Vaginal bleeding after menopause may be a warning sign of cancer of the uterus (womb). Your healthcare provider should check any unusual vaginal bleeding to find out the cause. In general, the addition of a progestin is recommended for women with a uterus to reduce the chance of getting cancer of the uterus.

Do not use estrogens, with or without progestins, to prevent heart disease, heart attacks, or strokes. Using estrogens, with or without progestins, may increase your chance of getting heart attacks, strokes, breast cancer, and blood clots.

Do not use estrogens, with or without progestins, to prevent dementia. Using estrogens, with or without progestins, may increase your risk of dementia.

Do not use estrogen products, including Divigel®, if you have unusual vaginal bleeding, currently have or have had certain cancers, had a stroke or heart attack in the past year, currently have or have had blood clots, currently have or have had liver problems, are allergic to any Divigel® ingredients, or think you may be pregnant.

The most common side effects for all estrogen products are headache, breast pain, irregular vaginal bleeding or spotting, stomach/abdominal cramps and bloating, nausea and vomiting, and hair loss. The less common but serious side effects include breast cancer, cancer of the uterus, stroke, heart attack, blood clots, dementia, gallbladder disease, and ovarian cancer.

In Divigel® clinical trials, the most common side effects were inflammation of the nasal passages and pharynx, upper respiratory tract infection, vaginal yeast infection, breast tenderness and vaginal bleeding. Call your healthcare provider right away if you have any symptoms that concern you.

Estrogen products should be used at the lowest dose possible for your treatment and only as long as needed. You and your healthcare provider should talk regularly about whether you still need treatment with Divigel®.

0.25 mg 0.5 mg 1 mg
Relief to the right degree

*and feel the
difference!*

Conveniently quick & simple!

*The placebo packet
does not contain any active ingredient
and is equivalent in weight to the
Divigel® 0.25 g dose.*

Divigel® offers a soothing formulation that is non-greasy and dries quickly. It's a gel that is invisible and odorless – so it's discreet. No one has to know that you are treating your hot flashes!

Divigel® is FDA-approved bio-identical estrogen therapy

Divigel® is indicated for the treatment of moderate to severe hot flashes associated with menopause

Easy-to-use and convenient that fits into your daily routine

- ◆ It's a gel so no sticky patches and no pills to remember
- ◆ Once-daily, individual-use foil packets for precise, accurate dosing
- ◆ Small application site – about the size of this 5x7 card
- ◆ Smaller amount of gel than any other gel or lotion estrogen product available

Provides effective relief with three dosing options – including the lowest approved dose of estradiol gel

- ◆ 0.25 g/day (0.25 mg estradiol)
- ◆ 0.5 g/day (0.5 mg estradiol)
- ◆ 1 g/day (1 mg estradiol)
