

PRODUCT: AMT64 MOSQUITO TRAP AC

WHY A MOSQUITO TRAP?

- ▲ It reduces mosquito population.
- ▲ Protect your family to decrease the risk of contracting mosquito borne diseases like Dengue and Chikungunya.
- ▲ Sleep well without mosquito bites and no more annoying noises at night.

HOW IT WORKS

Mosquitoes can easily locate where a person is by sensing carbon dioxide and temperature that he/she sheds, also they react extremely sensitively to near ultraviolet rays, Lactic Acid and Octenol. Using these properties of mosquitoes, Mostrap H-MAN mosquito trap can decoy and capture mosquitoes both in dark outdoors and in bright indoors by this system. The Mosquito Trap Mostrap creates a combination of these signals that confuses insects and suggests that the trap is the host.

- ▲ Spectrum & UV light are produced from the UV circle tube installed inside.
- ▲ CO₂ (a gas which is completely harmless to human body) is

produced when near UV rays are radiated onto Titanium dioxide.

- ▲ The heat and temperature is produced by the PTC heater when the trap works.
- ▲ Lactic Acid and Octenol is located in the bottom of the trap.
- ▲ Moisture is produced when near UV rays are radiated onto Titanium dioxide.

In this way Decoyed mosquitoes enter the exterminator through the capture windows on the upper part, and then are strongly drawn into the catch bag on the lower part.

Only they are drawn into the catch bag, they can't fly away upwards due to the strong current of the fan.

IMPORTANT

This trap does not involve spraying pesticides, repellents, citronella, streamers or candles. These products involve the use of hazardous chemicals known for causing damage to both humans and the environment. The Mosquito Trap Mostrap uses carbon dioxide, lactic acid and octenol, which are all produced by humans or animals.

The Mosquito Trap Mostrap use greener methods of the current market and is safe for you and the environment.

WHAT TO EXPECT

Although the mosquito trap begins to capture them immediately if there is any mosquito activity in the vicinity, it may take 6-8 weeks of use to reduce local mosquito population until generation cycles are interrupted. You can choose to stop using the trap at the time, but subsequently re-infection will occur after rain.

WHY A MOSQUITO TRAP?

- ▲ It reduces mosquito population.
- ▲ Protect your family to decrease the risk of contracting mosquito borne diseases like Dengue and Chikungunya.
- ▲ Sleep well without mosquito bites and no more annoying noises at night.

PRODUCT FEATURES:

- ▲ Cover area: 1000 to 4000 square meters.
- ▲ Host machine weight: 5.5kg.
- ▲ Full anti-rust structure.
- ▲ Anti-aging plastic machine shell, beautiful and durable.

- ▲ High on durability.
- ▲ Alarm design against burglars.
- ▲ 15 m low voltage wire.
- ▲ Used only for outdoor.

TIPS TO MAXIMIZE EFFECTIVENESS

1. In general, most of mosquitoes follow people through the main door. It's better to place mosquito trap near main entrance, balcony or front yard to decrease the opportunity of mosquitoes fly indoor.
2. Mosquito trap simulates the incentives of human body (temperature, breath). However, the grease from human skin is more attractive to mosquitoes. This will decrease the function of mosquito trap. Please place the trap as far as away from people and as close to the mosquito source as possible.
3. Mosquitoes like the scent of steric acid. To simulate human grease, you can use cos-

metics/cream which contains steric acid. Put some cosmetics/cream in the cap of plastic bottle, and place the cap at the bottom of catch container. Scent of steric acid will increase the chances of catching mosquitoes.

4. The model SQ-11/SQ-21 use CCFL UV light, UV light is invisible. The ability of the lamp to emit UV light decreases over time. Even though the lamp is still glowing after 2 years, there might not be enough UV light attracting mosquitoes. Under normal usage, we recommend change CCFL light every 2 years.

Place the trap at least 75 CM from the ground.
Don't put it on the ground.
