Needs

In today's workspace, the workflow is led by developments in the ever-changing IT world. Cable management is always a key component of all office system furniture. Itaca's innovative sliding-top mechanism enables the worktop to be slide out to access power sockets, telephone and data points which are concealed in a proper manner via a cable tray which is neatly hidden below the worktop.

daptable

The office system of choice in today's workspace should be one that can suit different needs, be it a single desk in a personal space or a large office space filled with office workstations. Easily expandable when needed and vice versa, Itaca can be changed easily to "suit" the 4 seasons of the year if necessary. Itaca has a height adjustable feature so that the workstation can be adjusted accordingly.

ompact

Itaca consists of few interchangeable compact parts which can be packed in a knock-down carton box. It is easy to manufacture, pack, transport and install. Trans-shipment is convenient and installation is quick and complications-free. Because it is compact, it is also easy to store and keeping inventory is a problem of the past.

ffordable

Unlike traditional workstations that are relatively more expensive, Itaca is a cost efficient open plan system which does not compromise on cable management or aesthetics which are primarily the 2 most important in the selection process of the ideal workstation for any officespace. With minimum parts and reusable components, Itaca can be reconfigured easily whilst reusing back most of the parts when there is a relocation exercise.

Itaca has been designed for all types of offices. Ranging from the individual to a team office to a large open plan office, it combines aesthetics with functionality. Completely flexible, it can be quickly reconfigured to suit many different needs.

ITACA collection is about simplicity. A system that creates clean lines which reflects your business values.
