

ASTRON

ASTRON watch - the concept is inspired from the sequel of legendary sci fi movie 'Tron', where hyperreality and hyperspeed exist as part of everyday life.

Astron is an attempt to blend all the unique influences from the characters, their Racing vehicles, outfit, equipments, and environment into a practical wrist wear

Use of sharp angular lines, flying discs and bright neon accents with black surfaces, imparts an essence of energy, speed and space age technology. The concept is an unusual combination of future with fantasy.

Construction details - This concept uses two horizontally aligned conventional watch movements - one to display time and another uses lume coated discs to display day and date. The assymetric form is carried to the double layered strap. Neon printed dial and stitching details adds to the futuristic character of the watch. Dramatic yet practical to manufacture.
