

A hole will be cut in the side of the HUB where the slide will come out from the inside of it. This is on the left hand side when looking at it from the graffiti area

The hole means that users will start their experience on the top floor of the HUB before slide down to the ground floor. Users will start their journey inside the HUB and it will continue through the voided area which has been designed around the HUB

## CONSTRUCTION

The HUB will be constructed in 3 panels, these are shown to the left

The HUB will be made from glass with a projection touch screen foil on top of it the whole way around. The interactive projection foil will be sun screen option which means that it has a sun viewable rear projection film on it. The foil will be applied to the glass panel and placed over the LCD TFT panel.
