

Functions

Cacti

1

Water Input Hose

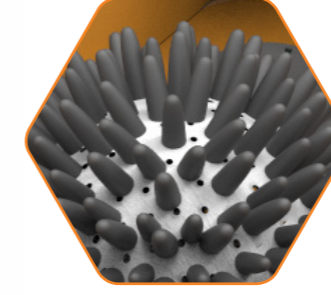

The water travels through the hose and fills the walls of the bowl creating a small amount of water pressure.

2

Pressure cleaning nosle

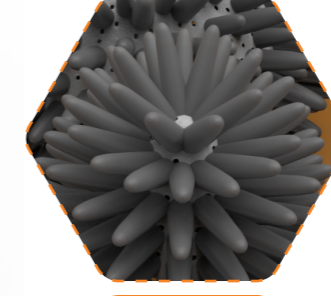

This allows the user to clean larger objects that may not fit in the compartments of the Cacti using a small stream of preassured water.

3

Water outlets

Each section of the cacti releases tiny jets of water when pressure is applied. e.g when a bowl is placed on this section and the user applies pressure, this triggers the water to be releashed through small holes in the material to assist the cleaning of the object.

4

Rubber Bristles

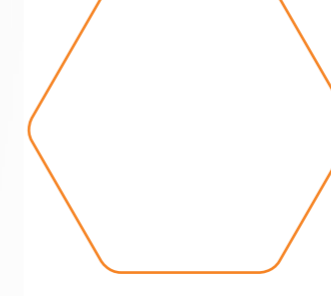

These bristles actively clean the dirt from any plates, bowls and glasses. The rubber allows the bristles to be wiped clean easily after use.

5

logo

The Cacti logo is embossed onto the front and rear to re-enforce the brand identity.

6

Plug

Allows the water to drain away wilst collecting any food waste. The plug can be removed to empty content collected.
