

Development

The model showed that all components would fit inside the design. The final design shows a teardrop shape with smooth edges, there is a horizontal grill over the speaker which adds to the detail of streamlined design. The screen area is a chamfer off the side of the teardrop shape, but is small enough to not distract from the overall shape.

Final Design

The shapes were developed to include the screen, dials and where the speaker would display on the outside of the design. I then had to make sure there was space for the internal parts such as the circuit board and the speaker itself. To ensure enough space I made a model.
