

DAB Radio

The task was to design a D.A.B Radio in the style of streamlining. Firstly I looked at streamlined cars, I pointed out the shapes that i thought made a product streamlined. I then drew these cars, so i knew what i should be looking for in my sketches when it comes to designing. once this was done, I started loosly drawing shapes and picking out the ones that i thought showed streamlined DNA. I then thought about making the shapes into a radio, where a screen would fit and where to place buttons.

The sketches should have large rounded ends and smaller, slightly more pointed ends.

The sketches below are the shapes that i thought showed streamlined features. Further designing was then done focusing on these shapes. Keywords for streamlined design that i had found included: teardrop shapes, smooth surfaces, fins, and horizontal markings
