

Memory Stick

The CAD task was to design a case to support a memory stick that would be placed inside. The design must be manufactured from injection moulding, therefore my design is manufactured in 4 parts, 2 parts each for the main body and the lid. The lid just slides off the U.S.B end. The lid has indentations for the user to grip onto when pulling the lid off. There is a hole at the back of the case for a LED light to go through.

My Design
