

Vest Defibrillator Design (Professional Users)

By Matt Nouv

A.E.D. Introduction

What Is an A.E.D.?

A.E.D. = Automated External Defibrillator

*Use as an **EMERGENCY TOOL** for individual who is having a **CARDIAC ARREST**

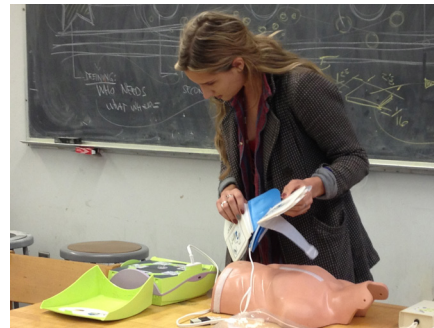

How Is a Defibrillator Use?

*The Defibrillator temporarily **stun the patient's heart**, allowing the heart to resume **beating effectively**

Step 1: Remove cover and then press **POWER BUTTON**

Step 2: Remove plastic sheet from Adult pads and **APPLY PADS TO PATIENT**

Step 3: **APPLY SHOCK TO PATIENT** and wait for further vocal and visual instructions

Step 4: **APPLY CPR** and repeat cycle

A.E.D. Introduction

Who uses the A.E.D.? Users such as:

Nurses at Retirement Community

National Guards

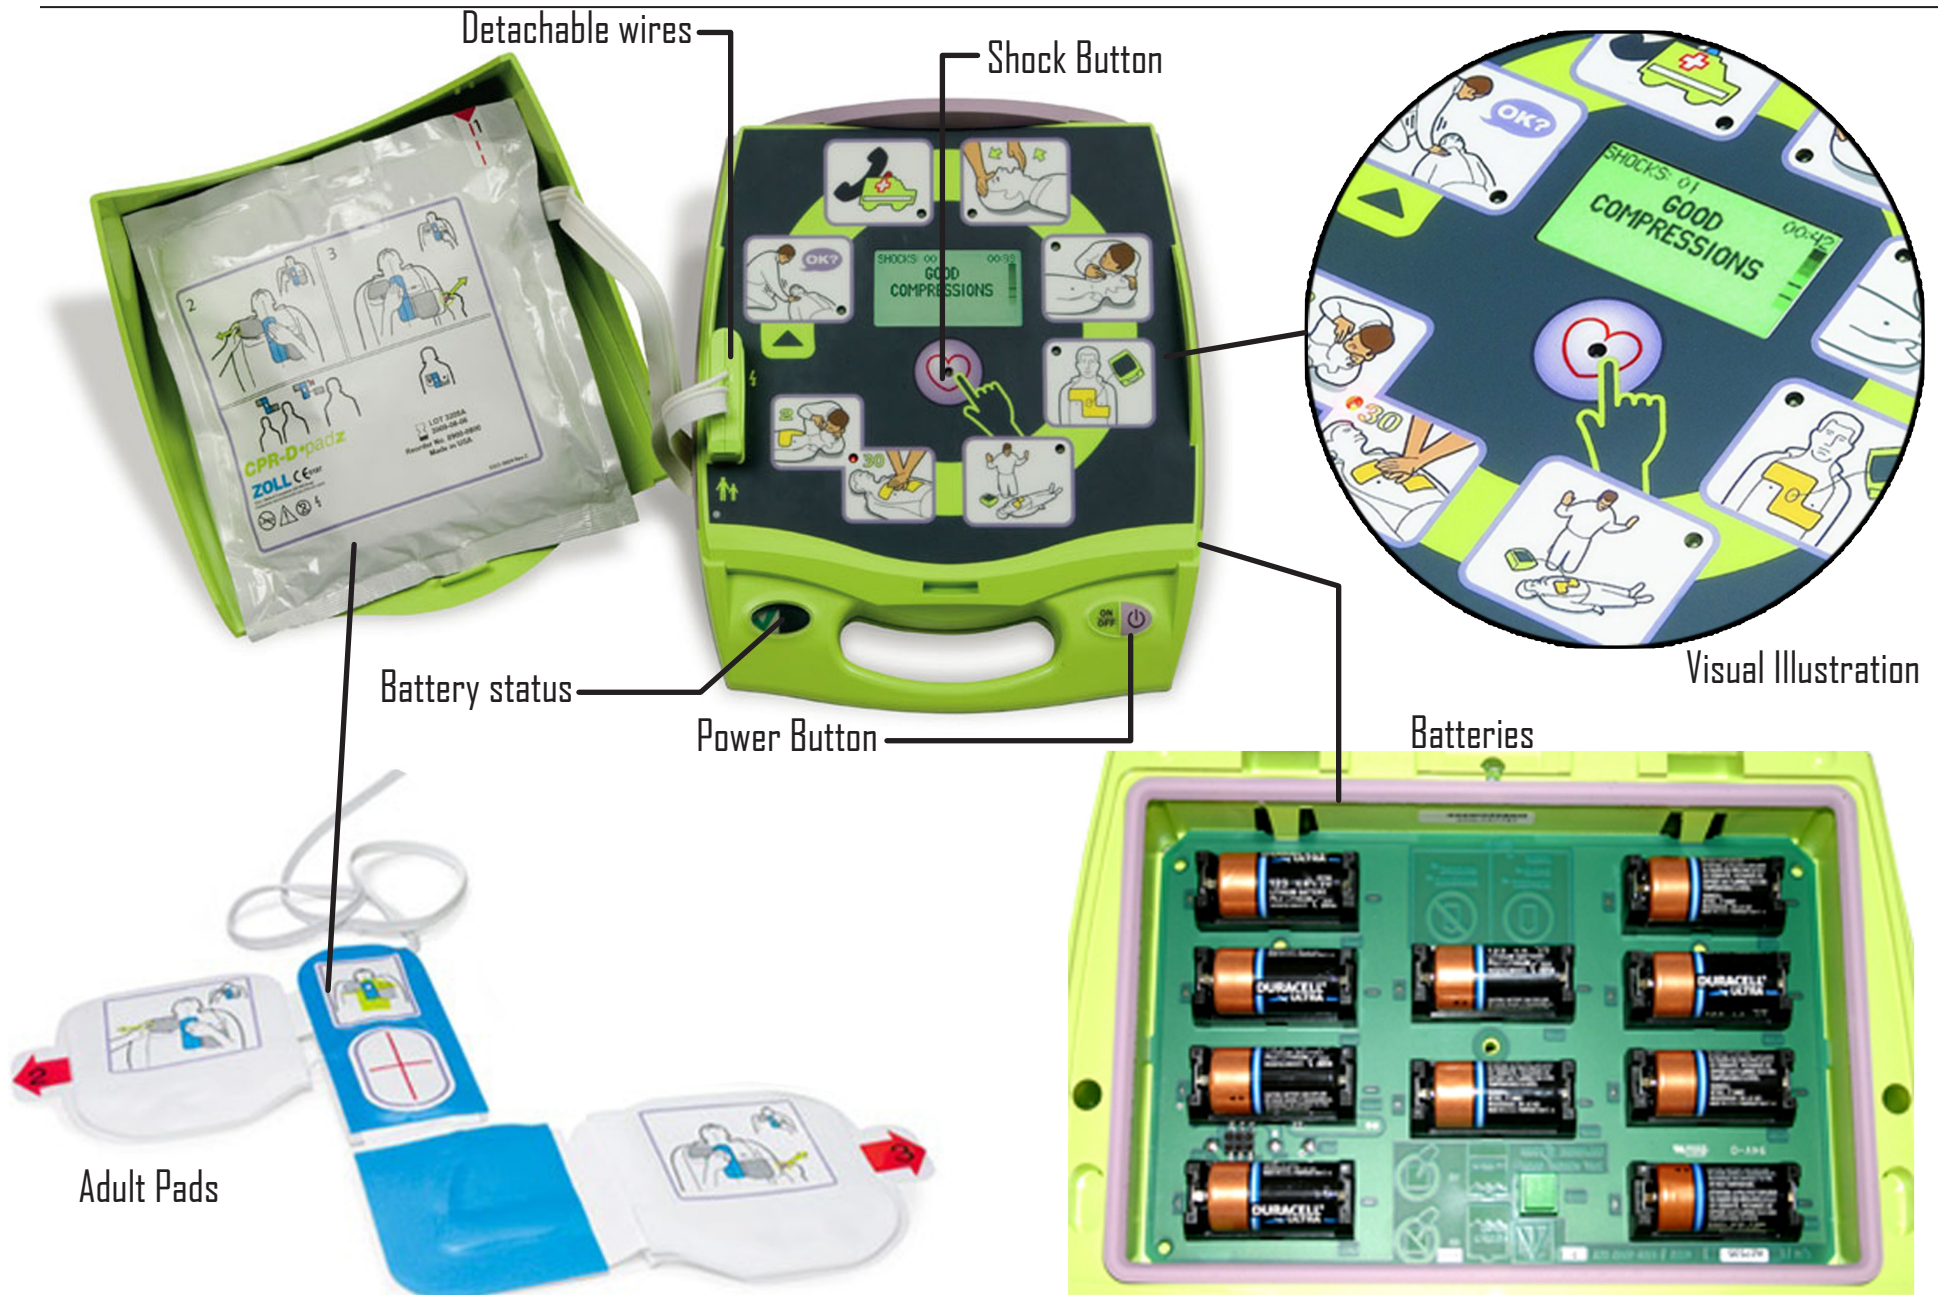

State Troopers

Citizens

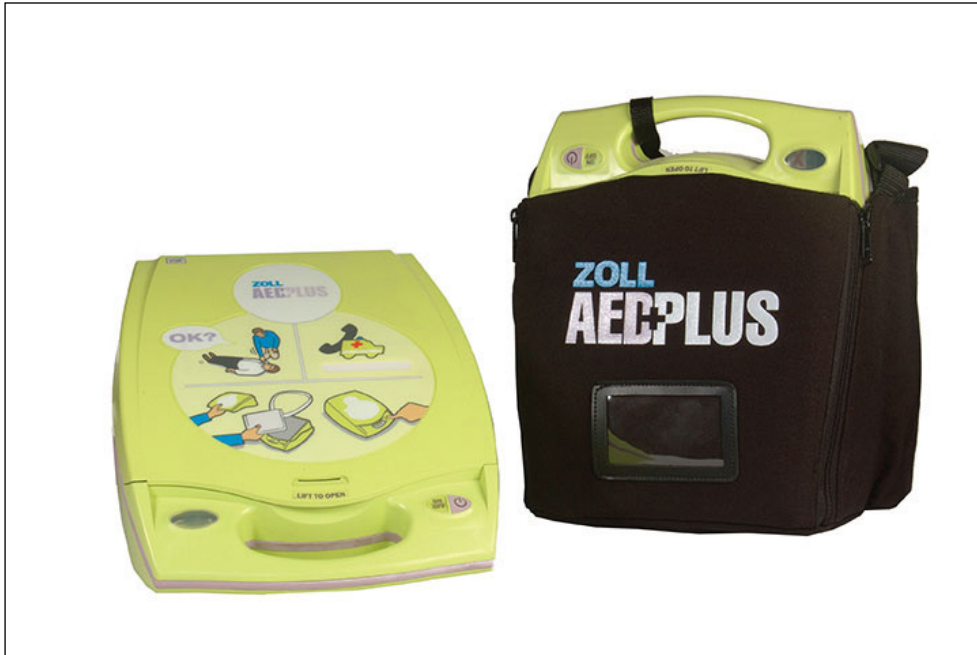

Group Experiment

Zoll A.E.D. Plus main functions:

Group Experiment

Zoll A.E.D. Plus main functions:

Have a personal bag to carry around

Tools for emergency:

Oxygen Mask
Medical gloves
Trauma Scissors
Razor

Group Experiment

Zoll A.E.D. steps of procedure:

01

02

03

Power Button	Lid Off	Peel off Plastic from Pads	Apply Pads	Apply Shock	Apply CPR
✗	✓	✓	✓	✗	✗
✗	✓	✓	✓	✓	✓
✗	✓	✗	✓	✓	✓

Heuristic Evaluation

Comments about steps of procedure:

- When taking off lid, the AED should automatically turn on without manually press power button
- The number 30 and 2 is confusing because I don't know CPR.
- The illustration of the pads has a different colour than the actual pads which is blue, not yellow.
- Lack of information
- Nervous of using a new product

I think the most significant part of the problem of this particular AED design is the lack of clarity on visual and verbal context information of how the person should use an AED. But most people don't know what an AED is used for.

Against the heuristics of:

Users' control of the product

Reflect the users' workflow

Help users recover from errors

Keeping it simple, design for information clarity, follow accessibility guidelines, and readability.

Heuristic Evaluation

Fixed steps for Zoll A.E.D. PLUS :

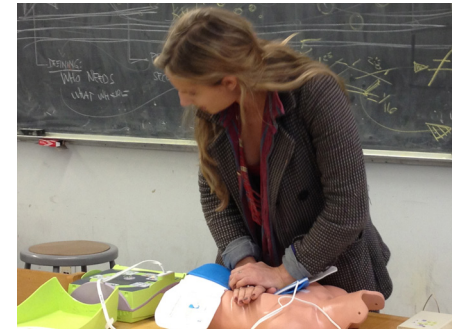

UNPACKING

PAD PLACEMENT

SHOCK DELIVERY

CPR DELIVERY

Open Cover

Press Power Button

Support Patient with Cover

Remove Plastic Tabs

Remove Hair, Metal from Patient

Place Pads on Chest + Ribcage

AED analyzing

Press Flashing Shock button

Repeat

Stand by

Apply 30 compressions

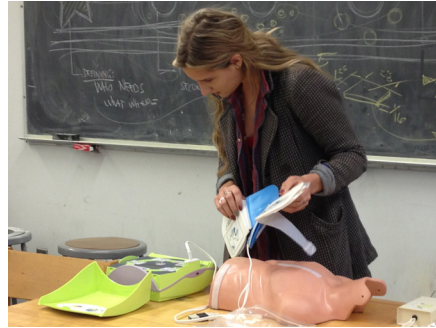

Give 2 breaths

Heuristic Evaluation

Essential steps for Zoll A.E.D. PLUS :

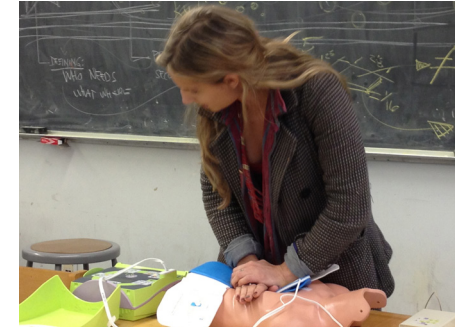

UNPACKING

PAD PLACEMENT

SHOCK DELIVERY

CPR DELIVERY

Open Cover (auto power on)

Remove Plastic Tabs

Remove Hair, Metal from Patient

Place Pads on Chest + Ribcage

AED analyzing

Press Flashing Shock button

Repeat

Provide simple CPR instructions via vocal/visual

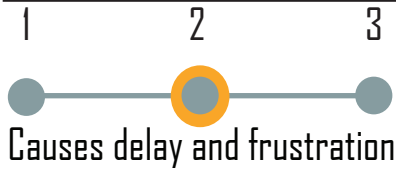

Apply 30 compressions and 2 breaths

Repeat

Product Evaluation

- 1 - Would enhance usability
- 2 - Causes delay and frustration
- 3 - Prevents completion of a task

Unpacking :

PROBLEM:

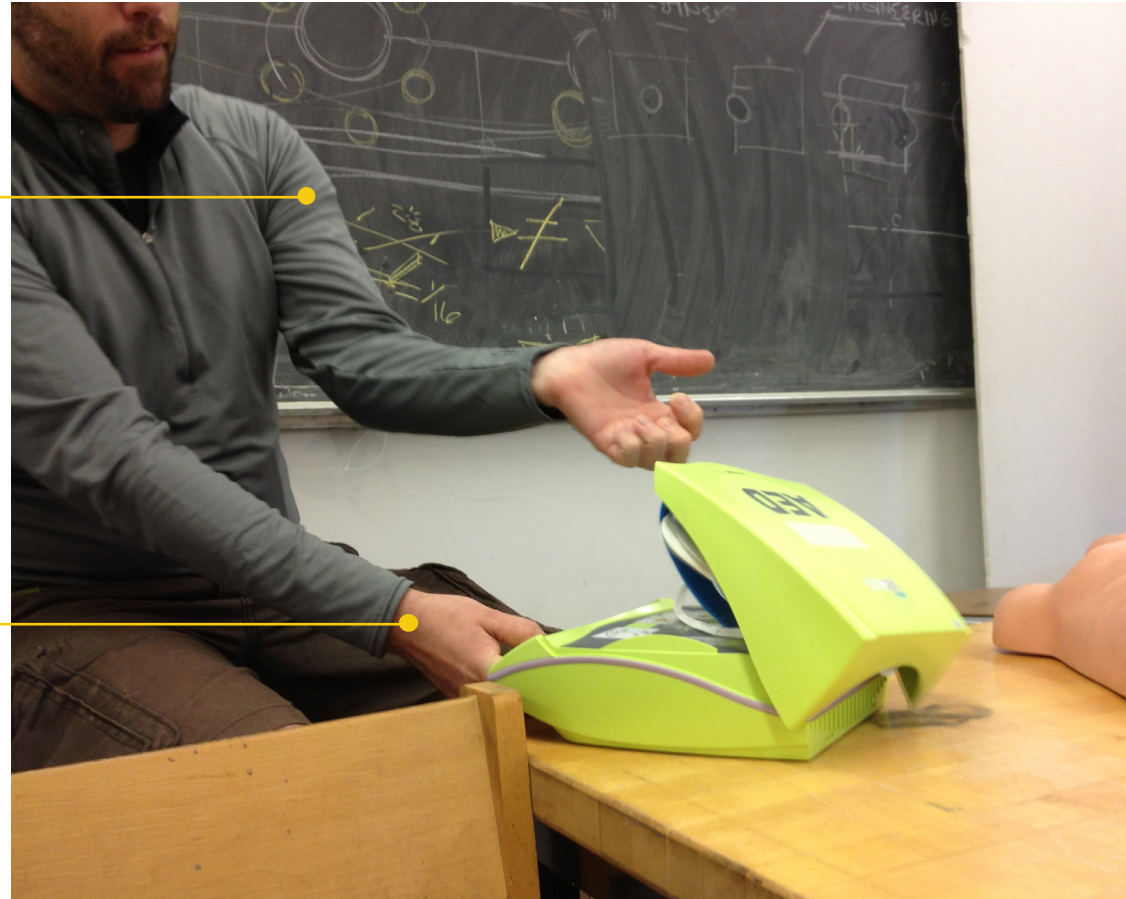

Require to PRESS power button

Prevent user to improve workflow and lack of visual communication with AED product during procedure.

SOLUTION:

Will AUTOMATICALLY turn on when open

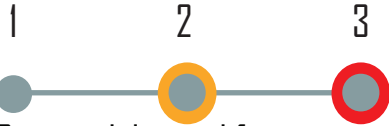

Improve workflow and communication with AED product during procedure.

Product Evaluation

- 1 - Would enhance usability
- 2 - Causes delay and frustration
- 3 - Prevents completion of a task

Pad Placement :

Causes delay and frustration

Prevents completion of a task

PROBLEM:

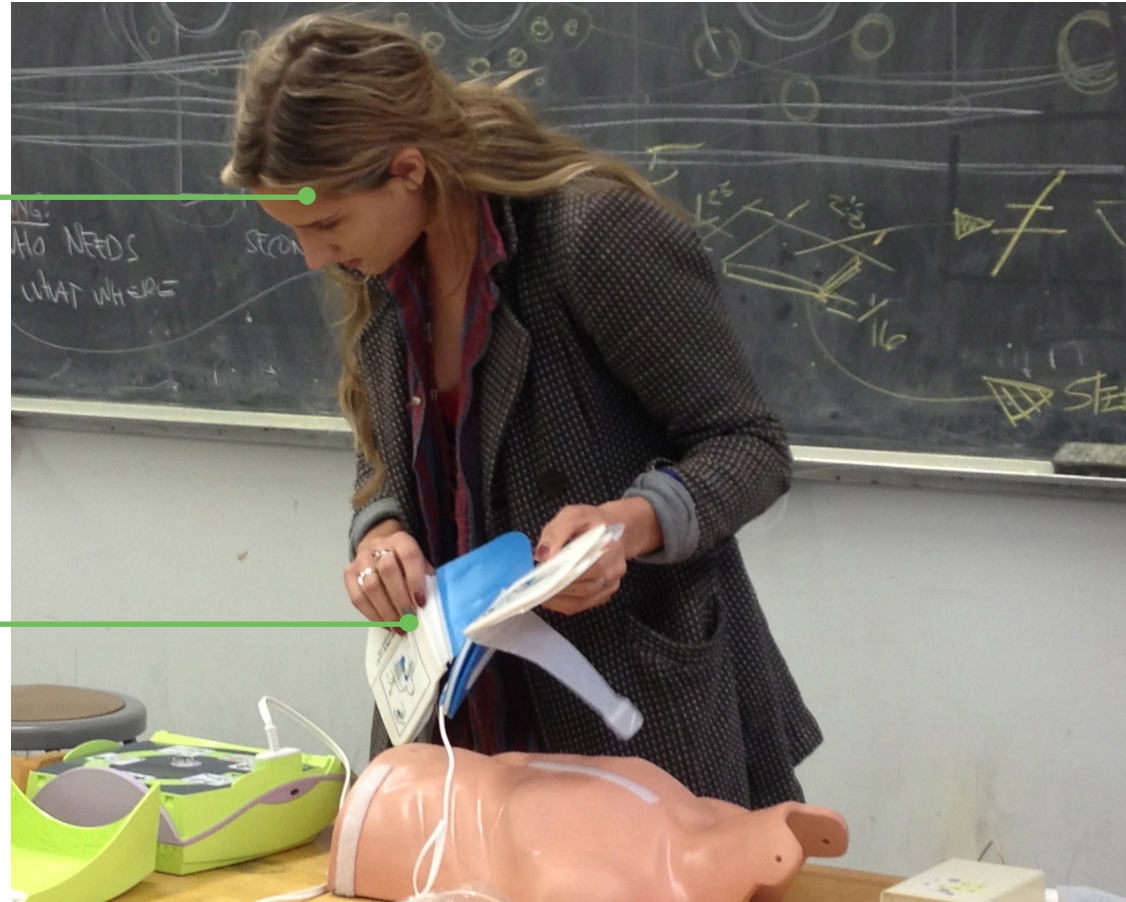

The illustrations have UNSPECIFIC COLORS

Confusing colors of visual instructions with the adult pads.

SOLUTION:

The Illustrations have CONSISTENT COLORS with product

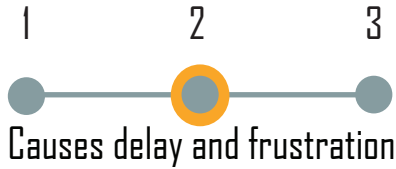

Improve visual communication with user.

Product Evaluation

- 1 - Would enhance usability
- 2 - Causes delay and frustration
- 3 - Prevents completion of a task

Shock Delivery :

PROBLEM:

The shock button is HARD TO PRESS

Delay procedure and risk of patient's survival.

SOLUTION:

Will AUTOMATICALLY SHOCK patient when after analyzing patient

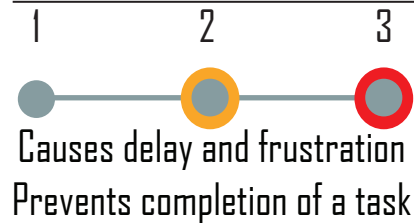

More efficient and allow the user to be more in control during the procedure.

Product Evaluation

- 1 - Would enhance usability
- 2 - Causes delay and frustration
- 3 - Prevents completion of a task

CPR Delivery :

PROBLEM:

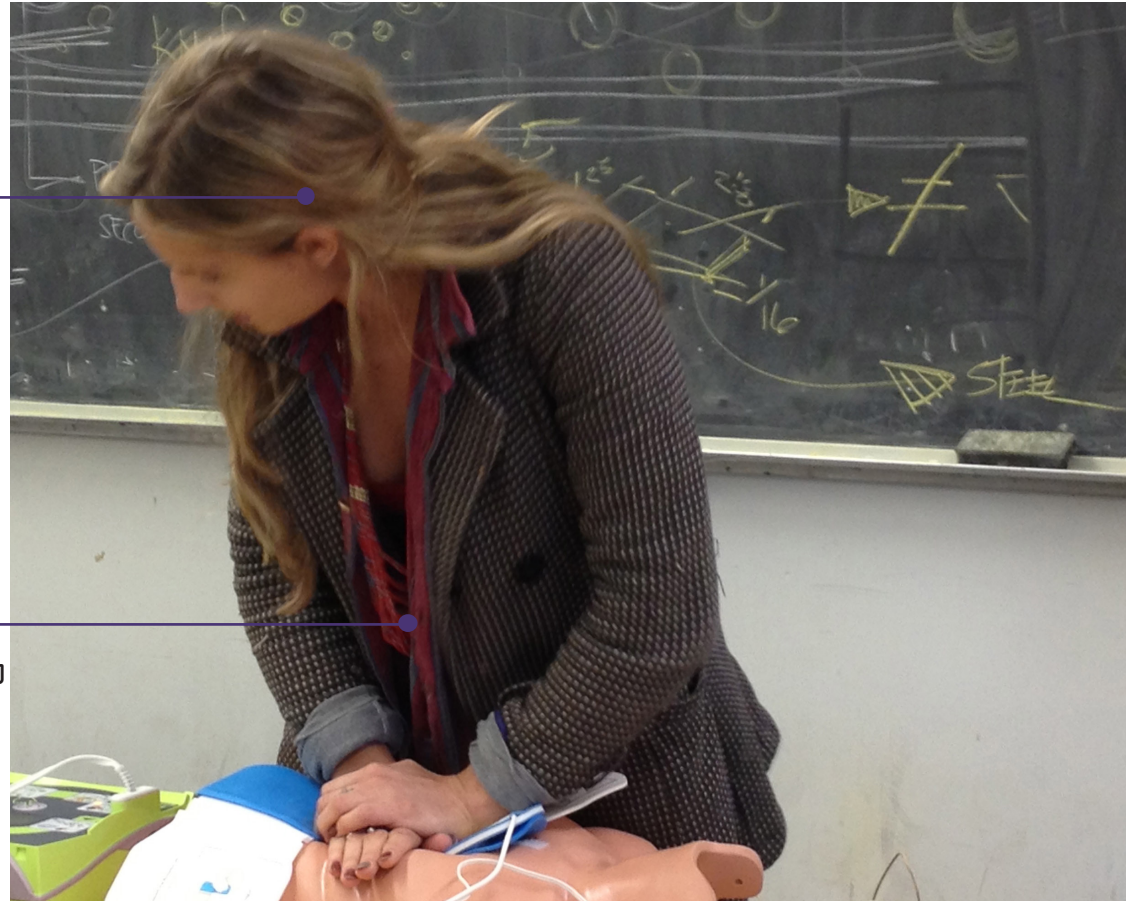

The product is unclear for TIME LENGTH of CPR

User cannot give effective CPR on patient. Product request heavy compressions from user.

SOLUTION:

Give vocal/visual instructions of APPROPRIATE CPR for new user

Help users recover from errors and follow accessible guidelines step by step.

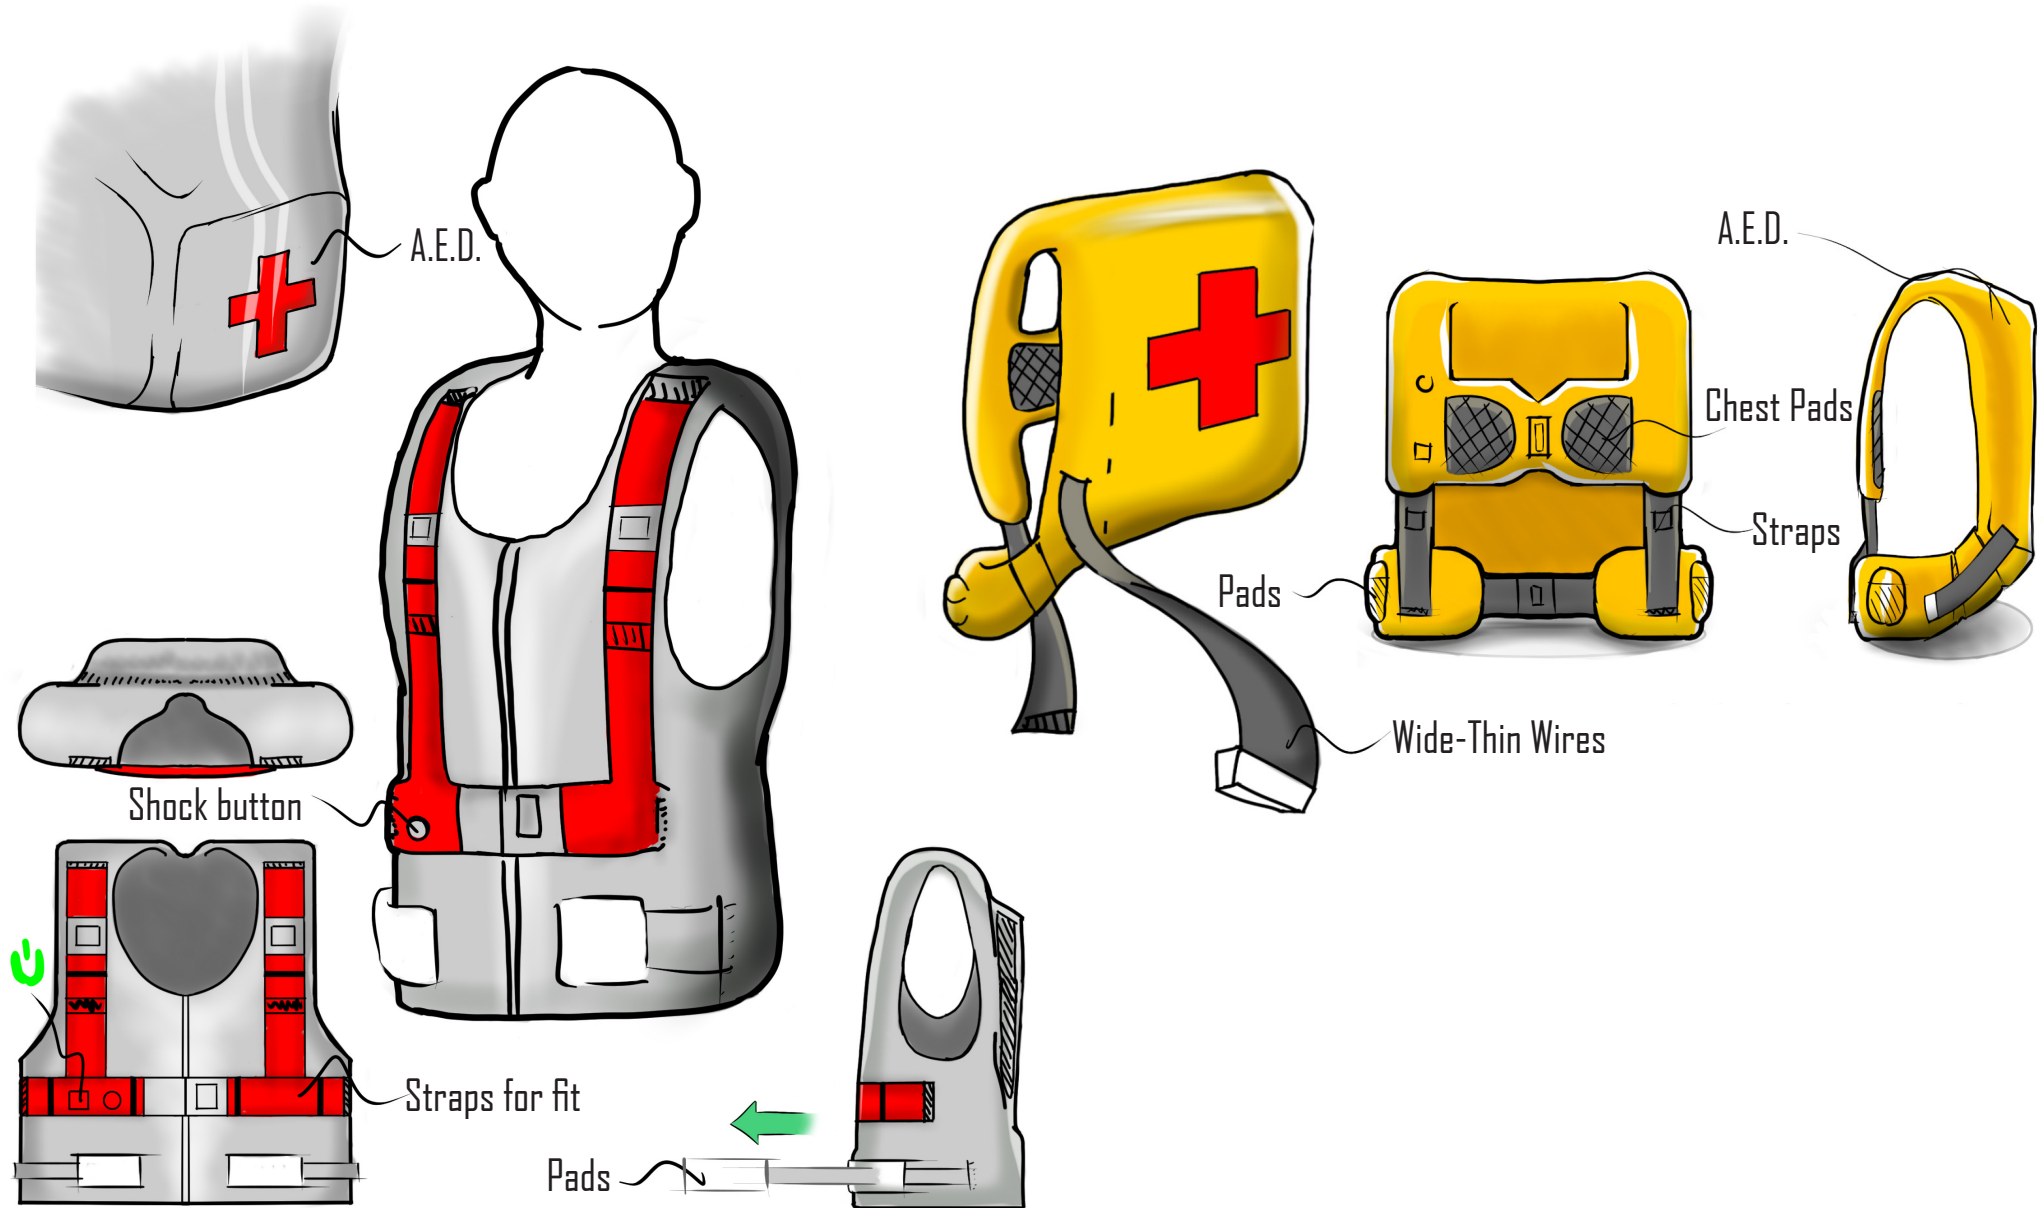

Ideation Process

Group Development- Defibrillator Concepts:

Location	Pads	Power Button	Main Feature
- On person (strapped vest or backpack)	<ul style="list-style-type: none"> - Pads are on corresponding sides on pull out of AED- connection for pads (wide-thin wires attached to AED) - Have release button by pad handle & reusable - Adult/child pad sizes 	<ul style="list-style-type: none"> - ON button by vest (illuminate green for ON & red OFF) - SHOCK button included on vest 	- PORTABLE BACKPACK (Optional: LED)
- Post on wall	<ul style="list-style-type: none"> - Pads are in single package; open by peel off, then stick onto patient - Two color indication for chest & abdominal 	<ul style="list-style-type: none"> - Auto ON when peel off pads and stick onto patient 	- SIMPLE OFFICE SPACE (Optional: LED)
- Ambulance, Fire truck, etc.	<ul style="list-style-type: none"> - Reusable pad handles; have corresponded sides for new pads - Two separated wires and handles - Two color indication for chest & abdominal 	<ul style="list-style-type: none"> - Auto ON by removing AED from dock - Illuminate when use 	- CHARGING DOCK (LED)
- Home environment	<ul style="list-style-type: none"> - Reusable pad handles - Have opposite sides for new pads - Two separated wires 	<ul style="list-style-type: none"> - Auto on when extending it by hand slots 	- TWO HANDLE AED SPLIT (shrink/expand volume)
