

**Professional 3-axis
Motion Control Crane**

VOLO

VOLO is designed as a workhorse moco system for stop motion studios. It's easily rolled from stage to stage and has an excellent reach for a small footprint. The VOLO includes the powerhouse Octodrive, an eight channel rack-mounted motor driver box and the DMC-16, Dragonframe's lightning fast, 16 channel controller. The pivot point on the arm is above 6 ft allowing the animator to freely move about the rig when animating. Other features include thread stem feet that allows easy transitions from casters to rock solid footing. All cabling is routed internally giving the VOLO a sleek streamlined look while protecting the cabling.
