majors, minors and areas of study

Learning Across Disciplines

Our approach to academics reflects the many and diverse interests of our students as well as the ever-changing needs of employers in today's global economy. Emmanuel's rigorous liberal arts curriculum is designed to inspire students to make connections across disciplines that spark new insights. From those insights come new ideas and pursuits that turn students into pioneers who engage in cutting-edge research, create provocative works of art, synthesize multifaceted and interrelated concepts and reflect on questions of meaning and ethics. With more than 50 areas of study in the arts, humanities, sciences and business, you'll pursue a major (or two), but your path will be uniquely your own.

Learning on Location

Emmanuel's location in the innovative, global, intellectual, cultural, tech-savvy city of Boston is a big part of our approach to academics and career preparation. From day one, you will be inspired to explore the unmatched internship opportunities at Boston's leading research, finance, media, healthcare, cultural, social service and nonprofit organizations that students and graduates in other cities may only ever aspire to experience. A number of these organizations are within walking distance, located in the renowned Longwood Medical and Academic Area. A short trip on public transportation brings you to the bustling Financial District, the exciting neighborhoods of Kendall Square and the Innovation District, and more.

Learning Collaboratively

From indigenous communities in South America and housing markets in Boston to culturally-socialized gender characteristics and the molecules used to process vision in the brain, research opportunities at Emmanuel take "challenging" and "inspiring" to a whole new level. Whatever your major or area of interest, you will have multiple opportunities to work side-by-side with faculty and fellow students on research projects that not only advance your knowledge, but also expand the frontiers of human knowledge. By participating early in your college career in the kinds of collaborative research projects often reserved for graduate students at other institutions, you will begin to forge a pathway that transforms academic study into personal fulfillment and professional success.

LEARNING

Emmanuel's Learning Community

We are excited to welcome you into our engaged and inclusive learning community. What does that mean, exactly? It means that though our class sizes are small, the horizons within them have no limits. Through spirited discourse, purposeful collaboration and the exploration of diverse theories and approaches, the differing perspectives of all of our students are respected and discussed openly. You will get to know our faculty as not just professors, but also as mentors and advocates who will know and value you as an individual and continually push you to venture outside of your comfort zone.
