

SPRINKLER TIMERS AND CONTROLLERS

Of course, a sprinkler system would be pretty inconvenient to use if you were forced to manually switch it on and off with the system's manual valve every day. That's why all of the irrigation systems provided by Green Lawn Sprinklers Inc. come with a sprinkler timer to automatically manage your sprinkler system for you. But watering your property on a schedule isn't the only thing a sprinkler timer can do – you can easily tailor your sprinkler system to meet your lawn's needs with the extra features a modern timer possesses.

Besides scheduling, a sprinkler timer can hold several programs for watering different zones with different amounts of water. Want to make sure your shrubs don't get the same amount of spray your grass needs and end up over-watered? Our sprinkler timers allow you to ensure they get only the water they need. Don't worry about the changing seasons, either – with the new smart controllers and smart sensors that come with modern sprinkler timers, your sprinkler system is automatically adjusted to spray based on the sun, rain, wind, and current temperature. This means more water only during the hot months when plants need it the most, and less when the weather demands it. No more worrying about whether your plants are getting too much water or not enough – the timer has you covered.

Sounds complicated to set up? It's not difficult at all. Using touch screens and easy-to-follow instructions, programming different spray schedules and zone coverage is simple. All you have to do is choose your ideal settings – the timer handles the rest. And if there's anything you don't understand, Green Lawn Sprinklers Inc. is happy to field any of your questions.

So take control of your sprinkler system. Our sprinkler timers make it possible. For more information on how a sprinkler timer adds to any irrigation system, contact Green Lawn Sprinklers Inc. today.
