

# Cleaner Production

means the continuous application of measures for design improvement, utilization of clean energy and raw materials, the implementation of advanced processes, technologies and equipment, improvement of management and comprehensive utilization of resources to reduce pollution at source, enhance the rates of resource utilization efficiency, reduce or avoid pollution generation and discharge in the course of production, provision of services and product use, so as to decrease harm to the health of human beings and the environment.

## Objectives of Cleaner Production

- Save Energy, Reduce Consumption, Reduce Wastes, Increase Efficiency
- Increase the ecological efficiency to decrease harm to the health of human beings and the environment

## The Core of Cleaner Production

- Overall prevention and sustainable improvement

**Cleaner  
Production**

Save Energy, Reduce Consumption, Reduce Wastes, Increase Efficiency
