DeJa View

DeJa View is a future concept based in the year 2030. DeJa View is an intelligent camera system that enables you to take the best photo anytime. Targeted primarily towards tourists DeJa View uses GPS and geotagging to find the best picture taken from the spot you're stood on using the ViewPoint feature.

GPS

DeJa View features advanced GPS systems which enables ViewPoint mode to work. The GPS can be used for general navigation to help you get around on your travels, It can also provide more guidance to better spots to view different sights from.

Augmented Reality

Also featured are a series of augmented reality features which serve several different purposes. It can be used to identify subjects in the field of view and get more information on them for example identifying buildings in the New York City skyline. It can also be used with the GPS so the directions appear on screen over a real time image.
