# THE CROW'S NEST

A tripod of palm trees form the base of the compressive structure for each of the different sized treehouse pods ranging from 600 sq.ft. to 1000 sq.ft. of interior space. The top of the teepee shaped tripods hold rain collectors and offer running water to the kitchen bathrooms and other sink areas.

Adjustable louvers provide the choice between shelter from the elements or 360 degree views.

Each stair is suspended by cable rigging which makes an interesting entrance. The same type of tensile rigging holds the stairs and pathways between the pods.

Ladders provide a separate entrance and exit to the bedrooms. The same ladders provide circulation to the covered decks above the bedrooms.
