

Solution Concept

1st idea—preorder and pick up

The transaction peak in campus restaurant always happens at meal time. So my idea is to build a pre-order and deliver food to vending site on shcedule. Thus, restaurants have plenty of time to prepare food, and cutomers are still able to customize their meal.

2nd idea—browse and go

For people do no pre-order, when the meal time comes, the vending machines has food ready from various local restaurants.
