

# Loafer

Luxury For Your Feet

## Project Brief:

Over the course of this project the goal was to design a shoe and go through the steps of building this shoe with the use of real materials and processes that are used while making shoes.

## Design Brief:

The shoe I designed was a loafer because I wanted to create a shoe that was comfortable and classy for the user to enjoy. The loafer is made from real black leather and is very soft and flexible for not only style but comfort. This loafer's design is for the user who loves to go out and enjoys the luxuries of life with style.
