

How Online Learning Works (A)

If you're unfamiliar with the concept of online learning, allow us to give you a brief overview. Online courses are an exceptionally accessible, flexible resource whether your goal is gaining new teaching skills, meeting professional development requirements, or advancing your teaching career with a program certificate.

Come to class whenever it's convenient for you by choosing when and where you participate in class. Your course is conducted according to a schedule, but there are no "live" classes to attend. Instead, lectures, coursework, and discussions all take place at your convenience. You choose the place - at home, at school - wherever you have access to a computer, modem, and an Internet Service Provider (ISP). You'll get the same high-quality instruction and course content that you demand, but without the day-to-day obstacles that prevent so many of us from pursuing other goals. With online learning, commuting to campus and paying for childcare are things of the past.

How Online Learning Works (B)

- You can attend class at your convenience - at school, work or home
- Lectures, coursework and discussions are available 24/7 online
- The instruction and course content are of the highest-quality
- The flexibility of online learning works for certificates, bachelor's degrees, masters degrees and PhDs
- All you need is access to a computer, modem, and an Internet Service Provider (ISP)
