

# ActionNetAgile™ Software Security

## Business drivers are changing the face of information technology.

Virtualization and cloud computing are optimizing resources, saving costs, and offering new and exciting ways of delivering 24/7 services. Working practices are also evolving with developers writing code for cloud-based services that interact with endpoint applications running on mobile devices, iPads, tablets, and smartphones. These changes are creating security challenges for organizations that need to protect proprietary or sensitive data. The ActionNetAgile™ Software Security Group is ready to be your single vendor and expert for your application security testing and deployment needs.

For customer's experienced in Agile software development, we offer experienced security assessment, process improvement, training, and software security testing services nationwide. Our experienced IT security professionals have successfully established and operated secure software development programs for government clients and have established mature processes for testing applications and coding libraries.

## Federal strength software security for your commercial business.

The application security architecture and integrated application security testing approaches we use are based on industry best practices. These include OWASP, ISO 27K and BSIMM frameworks, paired with an Agile system engineering life cycle methodology that will reduce cybersecurity risk while promoting transparency in development work.

**ActionNetAgile™ is now making available its development of secure government software to commercial customers through its SoftwareSecurity Testing & Process Deployment services.**

ActionNetAgile™ builds security into all of the Information Technology disciplines ensuring all layers of infrastructure and applications are protected and proactively monitored. Our processes are continually being improved using the latest industry best practices and lessons learned from our own software development process.

If you are interested in understanding more about our service and capabilities, please feel free to contact [XXXX@XXXX.com](mailto:XXXX@XXXX.com) or call xxx-xxx-xxxx.

## Benefits

- Reduces the cost of implementation by adapting security testing processes used by ActioNet's own development teams
- Integrates security testing checkpoints into automated Agile software development activities
- Mitigates cybersecurity risk through a process driven approach for flaw validation, prioritization and correction
- Validates a customer's secure development needs through assessment - ActioNet's "Top 10 Security Software Competencies"
- Simplifies integration of secure software architectural components through pre-tested libraries

## Service Features

- Provides Information Assurance policy development support
- Conducts Dynamic & Static Software Security Testing "as a Service"
- Provides assistance with process implementation - applying lessons learned
- Supports flaw tracking and mitigation process
- Validates the software supply chain - including open source software
- Continuous DevOps security monitoring available
